

**Topic**

- CSS

Name : Evan Diantha Fafian  
Class : SIB 2G  
Absent: 09  
NIM : 2341760163

**Objectives**

Students are expected to:

1. Students are able to create static websites using HTML and CSS
2. Students are able to apply the concept of CSS *Display*
3. Students are able to apply the concept of CSS Box Model
4. Students are able to apply the CSS *Flex Box concept*
5. Students are able to apply the concept of CSS *Grid*

**Attention**

This job sheet must be done step-by-step according to the practicum steps that have been given.

**What is CSS?**

CSS stands for "*Cascading Style Sheets*". As the name implies, CSS has the property of "*style sheet language*" which means the programming language used for web design. CSS is a programming language used to design a website page. In designing website pages, CSS uses markers, namely **id** and **class**. CSS can change fonts, font sizes, font colors and formats, set layout sizes, widths, heights and color elements, change the appearance of forms, create responsive website pages and much more.

To design a font can be done by defining the font, to set the color can use color, margins are used to set the distance outside a certain element. Set the font size using "*font size*". The **font** type uses the "*font-family*" and many others.

**How to Use CSS**

The css file is saved with **the .css** extension. then imported or linked into an HTML or PHP file that we want to design with CSS using the following syntax:

```
<link rel="stylesheet" type="text/css" href="style.css"/>
```

The top tag is used to connect the HTML file with the CSS file. Syntax is placed on the html file. The **rel** and **type** attributes in the **link** tag are used to define that what is called or linked is a **stylesheet** or CSS file, then the **href** attribute is used to put the location of the CSS file. In the example above, **style.css** file is located in a folder or a directory with html files. if the CSS file is located outside the folder, it can be associated with:

```
href=".. ./style.css"
```

If the css file is located in a folder, let's say the folder name is "assets", then to associate it with:

```
href=".. ./assets/style.css"
```

## Practical Section 1. Connecting HTML with CSS

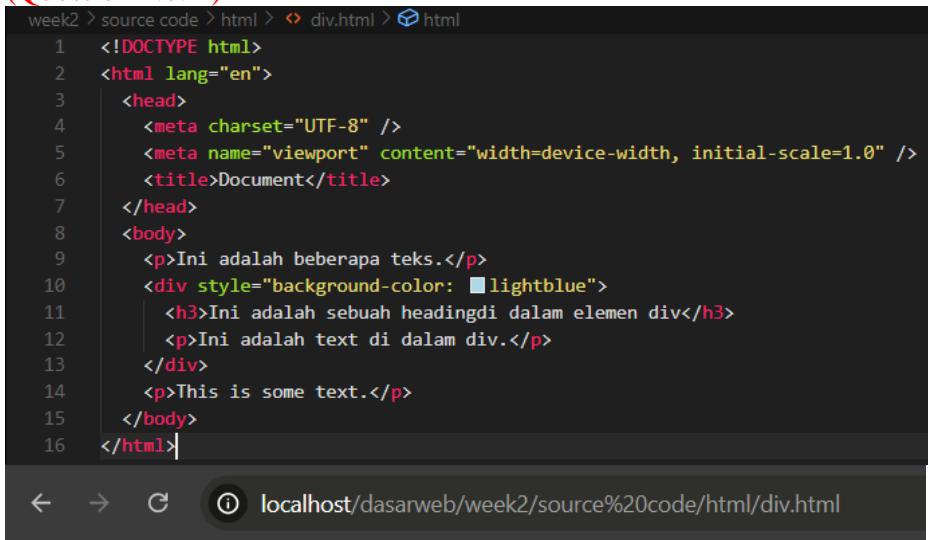

Step	Description
1	Create a new file in the dasarWeb folder and name it <code>index.html</code> .
2	Type into the <code>index.html</code> file the code below.
3	<pre>1 &lt;html&gt; 2   &lt;head&gt; 3     &lt;title&gt;Main Page&lt;/title&gt; 4     &lt;link rel="stylesheet" type="text/css" href="style.css"&gt; 5   &lt;/head&gt; 6   &lt;body&gt; 7     &lt;h2&gt;Welcome To DasarWeb&lt;/h2&gt; 8   &lt;/body&gt; 9 &lt;/html&gt;</pre>
4	Create one new file in the dasarWeb, naming it <code>style.css</code> . Type the code below inside the <code>style.css</code> file.
5	<pre>1 h2{ 2   color : orange; 3   font-family : Trebuchet MS; 4   text-align: center; 5 }</pre>
6	Save the file, then open a browser and run <code>localhost/dasarWeb</code>
7	In the structure of a web page, <code>index.html</code> will always be the main page of a web. So if there is a <code>index.html</code> in a directory then it will always be called and displayed in the browser. That is why in step 6 it is only typed <code>localhost/dasarWeb</code> page without the file name.
8	In the code inside the <code>index.html</code> there is a <code>&lt;link&gt;</code> tag in the <code>head</code> where the <code>href</code> attribute refers to the <code>style.css</code> file.
9	<code>style.css</code> contains code to set the display inside a page that refers to a <code>style.css</code> file, in this practicum it is <code>index.html</code> . So that the display inside the <code>index.html</code> will match the properties set in the <code>style.css</code> .

## Section using `<div>` tags

The `<div>` tag defines a section in an HTML document. The `<div>` element is often used as a container for other HTML elements to add *styles* with CSS or to display specific tasks using JavaScript.

## Practical Section 2: Use of div

Step	Description
1	Create a new file named <code>div.html</code> inside the dasarWeb folder. Type the code in step 2 inside the <code>div.html</code>

2	<pre> 1  &lt;html&gt; 2 3  &lt;body&gt; 4 5      &lt;p&gt;Ini adalah beberapa teks.&lt;/p&gt; 6 7      &lt;div style="background-color: # lightblue"&gt; 8          &lt;h3&gt;Ini adalah sebuah heading di dalam elemen div&lt;/h3&gt; 9          &lt;p&gt;Ini adalah teks di dalam div.&lt;/p&gt; 10     &lt;/div&gt; 11 12     &lt;p&gt;This is some text.&lt;/p&gt; 13 14 &lt;/body&gt; 15 16 &lt;/html&gt;</pre>
3	Save the file, then open your browser and run <a href="http://localhost/dasarWeb/div.html">localhost/dasarWeb/div.html</a>
4	<p>What do you understand from using div on the file? Record below your understanding.</p> <p><b>(Question No. 1)</b></p>  <p>The screenshot shows a browser window with the URL <a href="http://localhost/dasarweb/week2/source%20code/html/div.html">localhost/dasarweb/week2/source%20code/html/div.html</a>. The page displays the following content:</p> <pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3      &lt;head&gt; 4          &lt;meta charset="UTF-8" /&gt; 5          &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6          &lt;title&gt;Document&lt;/title&gt; 7      &lt;/head&gt; 8      &lt;body&gt; 9          &lt;p&gt;Ini adalah beberapa teks.&lt;/p&gt; 10         &lt;div style="background-color: # lightblue"&gt; 11             &lt;h3&gt;Ini adalah sebuah heading di dalam elemen div&lt;/h3&gt; 12             &lt;p&gt;Ini adalah text di dalam div.&lt;/p&gt; 13         &lt;/div&gt; 14         &lt;p&gt;This is some text.&lt;/p&gt; 15     &lt;/body&gt; 16 &lt;/html&gt;</pre> <p>The browser's status bar shows the URL <a href="http://localhost/dasarweb/week2/source%20code/html/div.html">localhost/dasarweb/week2/source%20code/html/div.html</a>.</p> <p>Below the browser window, the rendered content is shown:</p> <ul style="list-style-type: none"> <li>Ini adalah beberapa teks.</li> <li><b>Ini adalah sebuah heading di dalam elemen div</b></li> <li>Ini adalah text di dalam div.</li> <li>This is some text.</li> </ul> <p><b>My Answer :</b></p> <ul style="list-style-type: none"> <li>- The div tag here functions to divide segments or define groups of elements contained in an HTML document.</li> </ul>

## Getting to know classes and ids in HTML

Class and id are used as markers in html, what is meant by markers here is that html elements can be marked with class or id. Elements in HTML are tagged so that they can be manipulated using CSS or JavaScript. The simple shadow is if you have five boxes, all the boxes you have are blue, then you want to change the color of the third box, now this is where the use of class and id comes in, to give a sign or name to your box so that it can be changed, and the other boxes will not change.

The difference between class and id is that the class is called on css or javascript using a "period". ., and the id is called on CSS or javascript with the hashtag "#". The advantages of class is the class can be given to many HTML elements and can be called at once, while ID can only work on one tag, meaning one ID name can only be given to one element.

### Practical Section 3: Getting to know classes and ids in HTML

Step	Description
1	Complete the code inside the <code>index.html</code> with the following code.
2	<pre> 1  &lt;html&gt; 2 3  &lt;head&gt; 4      &lt;title&gt;Main Page&lt;/title&gt; 5      &lt;link rel="stylesheet" type="text/css" href="style.css"&gt; 6 7 8  &lt;body&gt; 9      &lt;h2&gt;Welcome To DasarWeb&lt;/h2&gt; 10     &lt;br&gt;&lt;br&gt; 11     &lt;!-- contoh penggunaan class --&gt; 12     &lt;div class="kotak"&gt;kotak 1&lt;/div&gt; 13     &lt;div class="kotak"&gt;kotak 2&lt;/div&gt; 14     &lt;div class="kotak"&gt;kotak 3&lt;/div&gt; 15     &lt;!-- contoh penggunaan id --&gt; 16     &lt;div id="kotak"&gt;Kotak 4&lt;/div&gt; 17 18 &lt;/body&gt; 19 &lt;/html&gt;</pre>
3	Complete the code inside the <code>style.css</code> file so that it becomes the code in step 4
4	<pre> 1  h2{ 2      color : orange; 3      font-family : Trebuchet MS; 4      text-align: center; 5  } 6 7  .kotak{ 8      padding: 50px; 9      width: 100px; 10     color: white; 11     margin: 10px; 12     background: orange; 13 } 14 15 #kotak{ 16     width: 400px; 17     color: white; 18     background: blue; 19     padding: 50px; 20 }</pre>
5	Save both files, then open a browser and run /refresh <code>localhost/dasarWeb</code>
6	<p>What do you understand from the use of class and id in index.html? Record below your understanding. (Question No. 2)</p> <pre> &lt;body&gt;     &lt;h2&gt;Welcome To DasarWeb&lt;/h2&gt;     &lt;br /&gt;&lt;br /&gt;     &lt;!-- Penggunaan Class --&gt;     &lt;div class="kotak"&gt;kotak 1&lt;/div&gt;     &lt;div class="kotak"&gt;kotak 2&lt;/div&gt;     &lt;div class="kotak"&gt;kotak 3&lt;/div&gt;     &lt;!-- Penggunaan ID --&gt;     &lt;div id="kotak"&gt;kotak 4&lt;/div&gt; &lt;/body&gt;</pre>

```

week2 > source code > css > # style.css > ...
1  h2 {
2    color: orange;
3    font-family: "Trebuchet MS";
4    text-align: center;
5  }
6
7  .kotak {
8    padding: 50px;
9    width: 100px;
10   color: #fff;
11   margin: 10px;
12   background: blue;
13 }
14
15 #kotak {
16   width: 400px;
17   color: #fff;
18   background: blue;
19   padding: 50px;
20 }

```

localhost/dasarweb/week2/source%20code/html/mainPage.html

---

My Answer :

- The id attribute and the class attribute are two global attributes that function to provide identity and grouping to an HTML element.
- The id attribute is unique, the id name cannot be used more than once in one HTML page
- While the value of the class attribute can be used multiple times.
- The id attribute cannot have white characters such as spaces, while the class attribute may use spaces if one element has more than one class

## How to Write CSS

CSS uses selectors (`id` and `class`) to determine the elements that will be modified by CSS, if it is likened to HTML as a pillar on a house building, then CSS functions as paint and decoration on the house building. There are three CSS writing method techniques, namely:

- *Inline CSS Style*

It is CSS created in an HTML tag that only applies to the document it is enclosed in. Usually this technique is used for special formatting of an HTML element and is not used to format the entire element in a web document.

Example:

```
<h1 style="color:blue; margin-left:30px;">This is a heading.</h1>
```

- *Internal CSS Style*

An internal style sheet for a web page applies only to that web page. The internal style sheet is defined in the `HEAD` section of an HTML page, in the `<style>` tag as follows:

```
<head>
<style>
body {
    background-color: linen;
}
h1 {
    color: maroon;
    margin-left: 40px;
}
</style>
</head>
```

Figure 1. Internal CSS

- *External CSS Style*

It is ideal for use on the web with many pages. By using the External Style Sheet, the appearance of the entire website content can be changed by changing just one file. *External Style Sheets* must not contain html tags, and are stored in a file with the `*.css` extension

Example:

```
body {
    background-color: lightblue;
}
h1 {
    color: navy;
    margin-left: 20px;
}
```

Figure 2. External CSS

The way to call an *External Style Sheet* in a web page is by using the `<link>` tag with the `rel` attribute placed on the `section head`. Example:

```
<head>
<link rel="stylesheet" type="text/css" href="mystyle.css">
</head>
```

Figure 3. Using an external CSS file into HTML

#### Practical Section 4: Changing the *Background* of a Web Page with CSS

Step	Description
1	Add the code snippet in step 2 below to the <code>style.css</code> file
2	<pre>body{     background: □lightcyan;     color: □white; }</pre>
3	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb</code>
4	Record your observations and write your answer below. (Question No. 3) <pre>body {     background: □lightcyan;     color: □#fff; }</pre>

My Answer :

- If `body` is included in the css file then `body` will become the parent of the web page that will be displayed.

### Practical Section 5: Using *images* for *backgrounds*

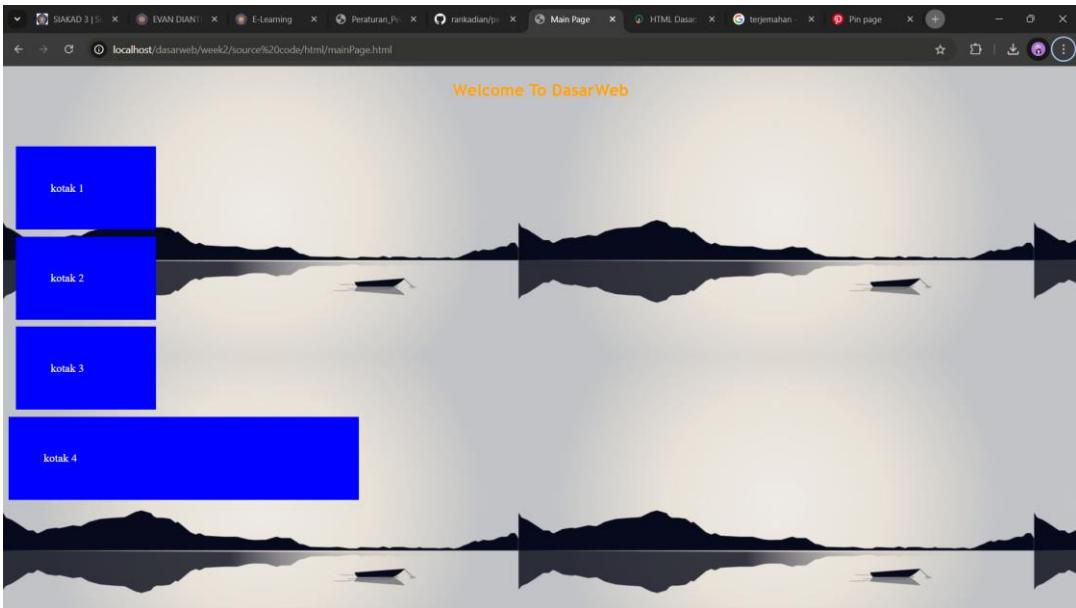

The background-image *property* assigns one or more *background images* to an element. By default, the background image is placed in the top left corner of the element, and it repeats vertically and horizontally.

Tip: The background of an element is the total size of the element, including *padding* and *borders* (but not margins).

Tip: Always set the background color to use if the image is not available.

Practicum Steps:

Step	Description
1	In the <code>style.css</code> file change the value from background property to bunga2.jpg (or the name of image file as background) as in the code snippet in step 2.
2	<pre>body{     background: url('bunga2.jpg');     color: white; }</pre>
3	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb</code>
4	Record your observations and write your answer below. (Question No. 4) <pre>body {     background: url('../img/tes.jpeg');     color: #fff;</pre>

My Answer :

- background: url() is used to search for jpg, jpeg, png files to be used as web wallpaper

5 Add an image file named `field1.jpg` and `tree1.jpg` (or the name of images file as background and object) to the `img` folder .

6 Type the following code on `style.css`.

```
body{
    background: url('img/tree1.jpg'), url('img/field1.jpg');
    background-repeat: no-repeat, repeat;
    color: white;
}
```

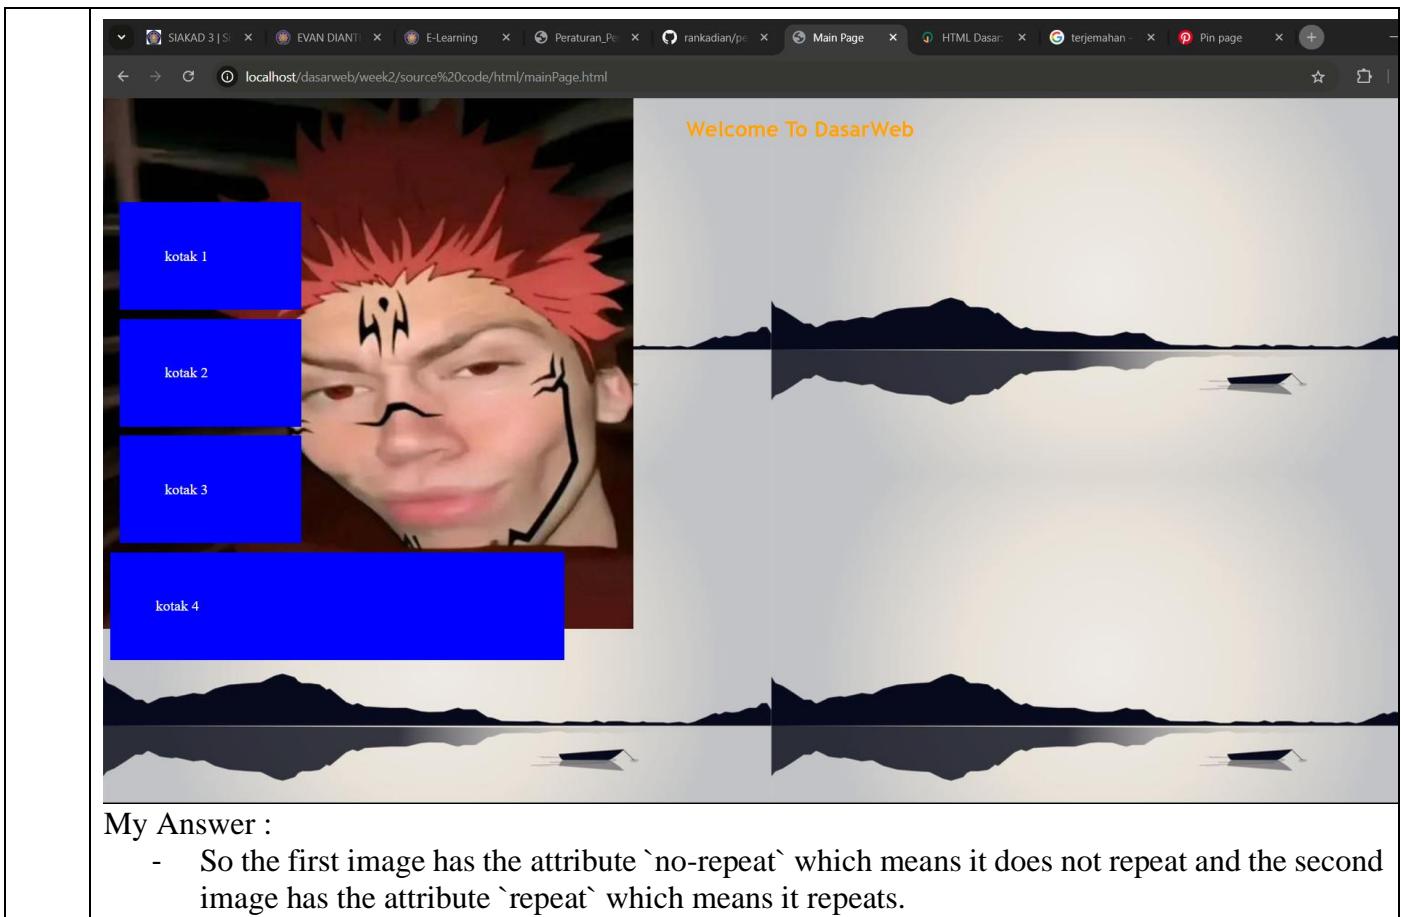

8 Save the file, then open the browser and run /refresh `localhost/dasarWeb`

Your code runs fine if it looks like the one below:

9 Record your observations and write your answer below. (Question No. 5)

```
body {
    background: url(..../img/sukuna.jpeg), url(..../img/tes.jpeg);
    color: #fff;
    background-repeat: no-repeat, repeat;
}
```

## Practical Section 6: Margins and Padding on CSS

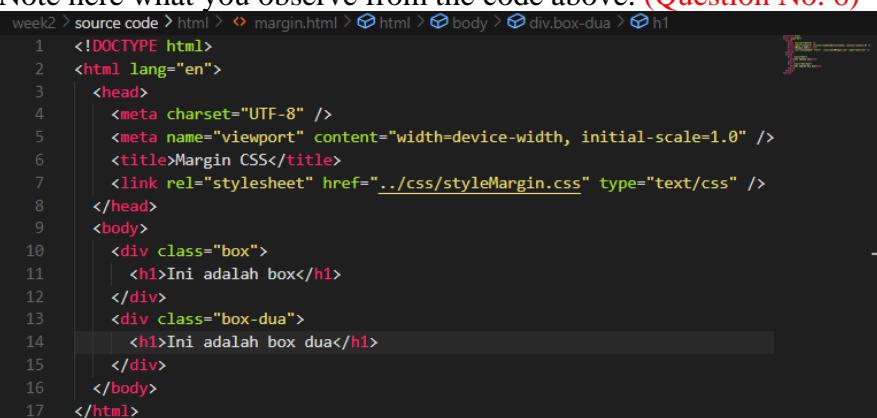

### Getting to Know Margins in CSS

The margin is the outer side of an element. for example you want to set the distance between the elements. You can use the *margin syntax* to set it. There are several outer sides of margin which are,

- The top margin is written in the CSS with a 'margin-top',
- the bottom margin or the outer spacing of the bottom is written in CSS with 'margin-bottom',
- 'margin-left' as the outer spacing to the left of the element, and
- 'margin-right' is the outer side on the right side

But if you only use the 'margin' syntax it will automatically set the top, bottom, left and right spacing of the element.

Step	Description
1	Rename <a href="#">index.html</a> to <a href="#">backgroundCSS.html</a>
2	Create a new file inside the <a href="#">dasarWeb</a> folder named <a href="#">index.html</a> . This means that you have a new <a href="#">index.html</a> file.
3	Type the following code on <a href="#">index.html</a>

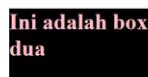

4	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3 4  &lt;head&gt; 5      &lt;title&gt;Margin CSS&lt;/title&gt; 6      &lt;link rel="stylesheet" type="text/css" href="styleMargin.css"&gt; 7  &lt;/head&gt; 8 9  &lt;body&gt; 10    &lt;div class="box"&gt; 11       &lt;h1&gt;Ini adalah box&lt;/h1&gt; 12    &lt;/div&gt; 13    &lt;div class="box-dua"&gt; 14       &lt;h1&gt;Ini adalah box dua&lt;/h1&gt; 15    &lt;/div&gt; 16 &lt;/body&gt; 17 18 &lt;/html&gt;</pre>
5	Create a new file named <code>styleMargin.css</code> in the <code>dasarWeb</code> folder.
6	<p>Type the following code toto the <code>styleMargin.css</code></p> <pre> 1  h1{ 2      color: #pink; 3  } 4  .box{ 5      background: #blue; 6      height: 200px; 7      width: 300px; 8      margin: 30px; 9  } 10 11 .box-dua{ 12     background: #black; 13     height: 100px; 14     width: 200px; 15     margin-left: 500px; 16 }</pre>
7	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb</code>
8	<p>Note here what you observe from the code above. (Question No. 6)</p>  <pre> week2 &gt; source code &gt; html &gt; margin.html &gt; html &gt; body &gt; div.box-dua &gt; h1 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3  &lt;head&gt; 4      &lt;meta charset="UTF-8" /&gt; 5      &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6      &lt;title&gt;Margin CSS&lt;/title&gt; 7      &lt;link rel="stylesheet" href="../css/styleMargin.css" type="text/css" /&gt; 8  &lt;/head&gt; 9  &lt;body&gt; 10    &lt;div class="box"&gt; 11       &lt;h1&gt;Ini adalah box&lt;/h1&gt; 12    &lt;/div&gt; 13    &lt;div class="box-dua"&gt; 14       &lt;h1&gt;Ini adalah box dua&lt;/h1&gt; 15    &lt;/div&gt; 16 &lt;/body&gt; 17 &lt;/html&gt;</pre>

```

week2 > source code > css > # styleMargin.css > ↗ .box-dua
1  h1 {
2    color: pink;
3  }
4
5  .box {
6    background: blue;
7    height: 200px;
8    width: 300px;
9    margin: 30px;
10 }
11
12 .box-dua {
13   background: black;
14   height: 100px;
15   width: 200px;
16   margin-left: 500px;
17 }

```

localhost/dasarweb/week2/source%20code/html/margin.html

---

My Answer :

- Margin controls the space outside an element.

9 Change the margin value in the settings `.box` to `margin: 300px;`. Observe what the difference is.

10 Note here what you observe from the code above. (Question No. 7)

```

.box {
  background: blue;
  height: 200px;
  width: 300px;
  margin: 300px;
}

```

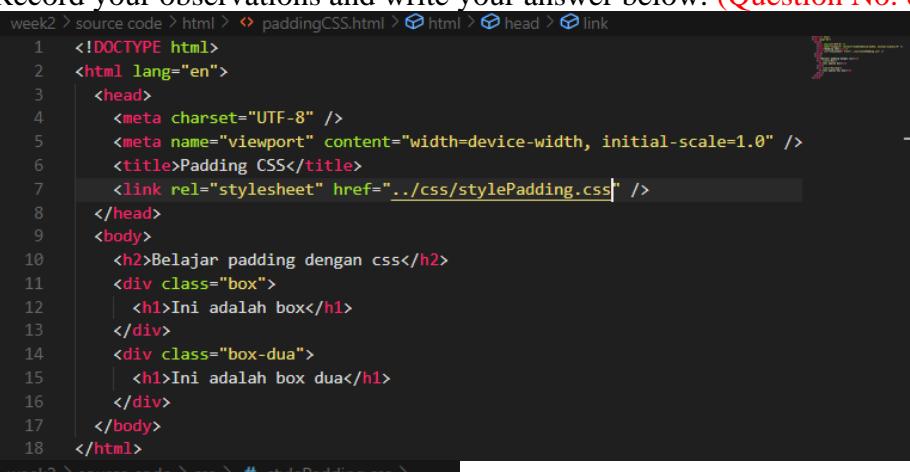

My Answer :

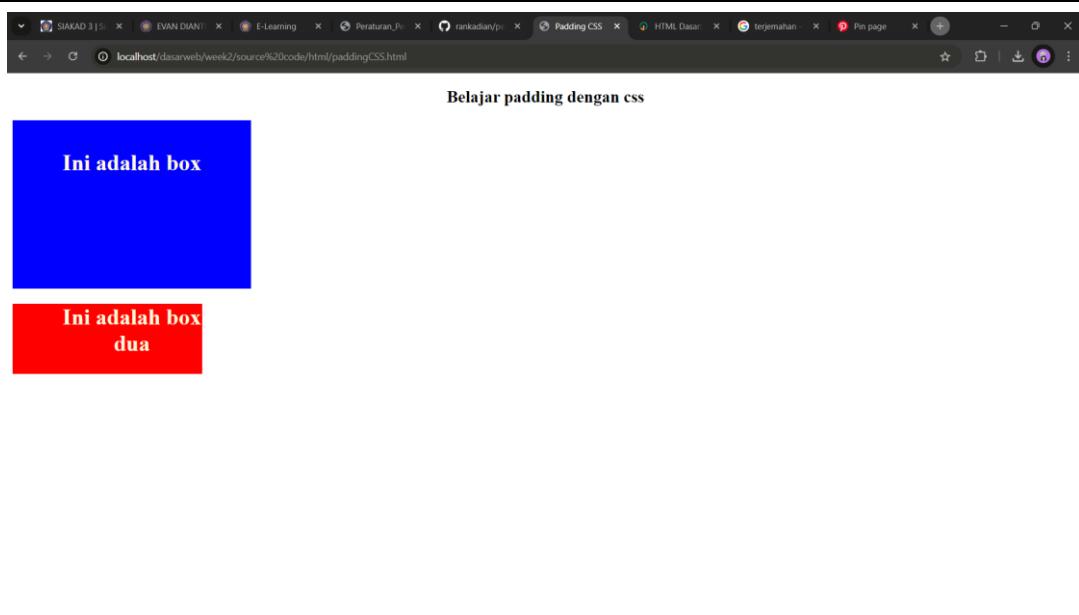

- space outside element widens by 300px

#### ▪ Getting to Know *Padding* in CSS

Padding is the inner side of an element. We can use syntax padding to set the spacing on the inner sides of an element that we specify. Just like the margin has sides. such as top, left, right, bottom. The type of padding is the top padding written in CSS with 'padding-top' which means setting the inner side of the top of an element, the bottom pad or the spacing in the bottom is written in CSS with 'padding-bottom', 'padding-left' as the inner spacing on the left side of the element, and 'padding-right' is the outer side on the right. If you only use the 'padding' syntax, it will automatically set the top, bottom, left and right spacing of the inner element.

Step	Description
1	Rename <code>index.html</code> to <code>marginCSS.html</code>
2	Create a new file in the <code>dasarWeb</code> folder named <code>index.html</code> . This means that you have a new <code>index.html</code> file.
3	Type the following code to <code>index.html</code>
4	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3 4  &lt;head&gt; 5      &lt;title&gt;Padding CSS&lt;/title&gt; 6      &lt;link rel="stylesheet" type="text/css" href="stylePadding.css"&gt; 7  &lt;/head&gt; 8 9  &lt;body&gt; 10    &lt;h2&gt;Belajar Padding dengan CSS&lt;/h2&gt; 11    &lt;div class="box"&gt; 12       &lt;h1&gt;Ini adalah box&lt;/h1&gt; 13    &lt;/div&gt; 14    &lt;div class="box-dua"&gt; 15       &lt;h1&gt;Ini adalah box dua&lt;/h1&gt; 16    &lt;/div&gt; 17 &lt;/body&gt; 18 19 &lt;/html&gt;</pre>
5	Create a new file named <code>stylePadding.css</code> in the <code>dasarWeb</code> folder
6	Type the following code to <code>stylePadding.css</code>

	<pre> 1  h1{ 2      text-align: center; 3      color: #cornsilk; 4 5  h2{ 6      text-align: center; 7  } 8 9  .box{ 10     background: #blue; 11     height: 200px; 12     width: 300px; 13     padding: 20px; 14 15 .box-dua{background: #red; 16     height: 100px; 17     width: 600px; 18     padding-left: 70px;} </pre>
8	Save the file, then open the browser and run /refresh <a href="http://localhost/dasarWeb">localhost/dasarWeb</a>
9	<p>Record your observations and write your answer below. (Question No. 8)</p>  <pre> week2 &gt; source code &gt; html &gt; paddingCSS.html &gt; html &gt; head &gt; link 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3      &lt;head&gt; 4          &lt;meta charset="UTF-8" /&gt; 5          &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6          &lt;title&gt;Padding CSS&lt;/title&gt; 7          &lt;link rel="stylesheet" href="../css/stylePadding.css" /&gt; 8      &lt;/head&gt; 9      &lt;body&gt; 10         &lt;h2&gt;Belajar padding dengan css&lt;/h2&gt; 11         &lt;div class="box"&gt; 12               &lt;h1&gt;Ini adalah box&lt;/h1&gt; 13         &lt;/div&gt; 14         &lt;div class="box-dua"&gt; 15               &lt;h1&gt;Ini adalah box dua&lt;/h1&gt; 16         &lt;/div&gt; 17     &lt;/body&gt; 18 &lt;/html&gt; </pre> <pre> week2 &gt; source code &gt; css &gt; # stylePadding.css &gt; ... 1  h1 { 2      text-align: center; 3      color: #cornsilk; 4  } 5 6  h2 { 7      text-align: center; 8  } 9 10 .box { 11     background: #blue; 12     height: 200px; 13     width: 300px; 14     padding: 20px; 15 } 16 17 .box-dua { 18     background: #red; 19     height: 100px; 20     width: 600px; 21     padding-left: 70px; 22 } </pre>

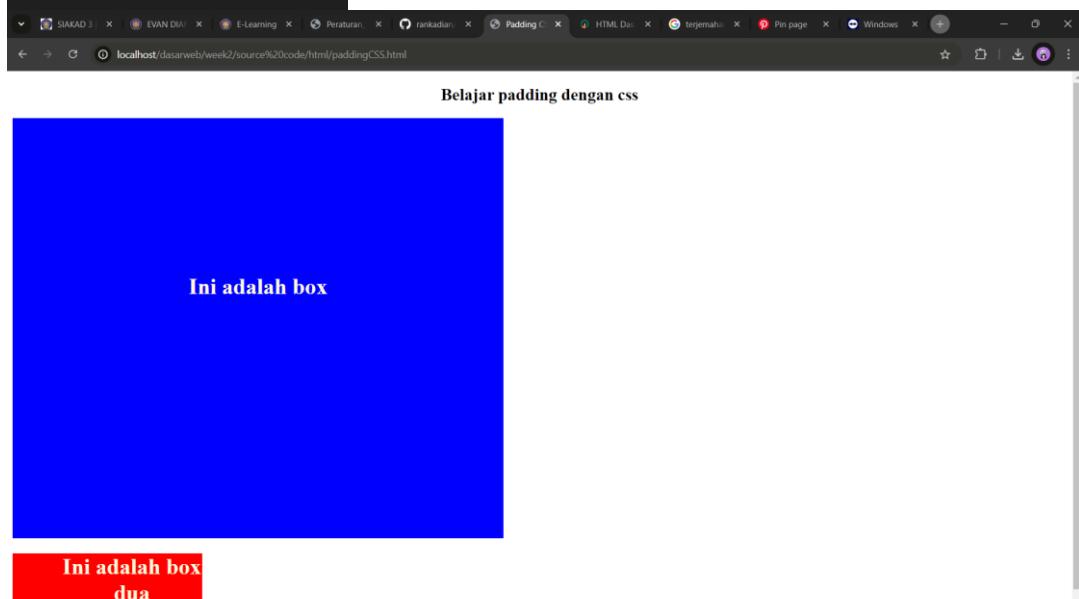

My Answer :

- padding controls the space within an element.

10 Change the padding value in the .box setting to padding=200px;

Record your observations and write your answer below. (Question No. 9)

```
.box {  
background: blue;  
height: 200px;  
width: 300px;  
padding: 200px;  
}
```

11

My Answer :

- space inside element widens by 200px

## Practical Section 7: Font Settings in CSS

Some of the css syntax used to set the font:

- *font-size* is used to set the font size
- *font-weight* is used to adjust the thickness of the font
- *font-family* to change the font type

- *font-style* is used to change the style of the font.
- *color* is used to change the color of the font

Step	Description
1	Rename <code>index.html</code> to <code>paddingCSS.html</code>
2	Create a new file in the <code>dasarWeb</code> folder named <code>index.html</code> . This means that you have a new <code>index.html</code> file.
3	Type the following code to <code>index.html</code>
4	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3 4      &lt;head&gt; 5          &lt;title&gt;Font CSS&lt;/title&gt; 6          &lt;link rel="stylesheet" type="text/css" href="styleFont.css"&gt; 7      &lt;/head&gt; 8 9      &lt;body&gt; 10         &lt;h1 class="tulisan_satu"&gt;Belajar CSS Dasar asiiik&lt;/h1&gt; 11         &lt;h1 class="tulisan_dua"&gt;Belajar CSS Dasar cihuuuii&lt;/h1&gt; 12         &lt;h1 class="tulisan_tiga"&gt;Belajar CSS Dasar yuhuuuuu&lt;/h1&gt; 13     &lt;/body&gt; 14 15 &lt;/html&gt;</pre>
5	Create a new file named <code>styleFont.css</code> in the <code>dasarWeb</code> folder
6	Type the following code to the <code>styleFont.css</code>
7	<pre> 1  .tulisan_satu{ 2      color: red; 3      font-family: sans-serif; 4      font-style: normal; 5  } 6 7  .tulisan_dua{ 8      color: green; 9      font-size: 24pt; 10     font-style: italic; 11 } 12 13 .tulisan_tiga{ 14     color: blue; 15     font-weight: bold; 16     font-style: oblique; 17 }</pre>
8	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb</code>
9	<p>Record your observations and write your answer below (Question No. 10)</p> <pre> week2 &gt; source code &gt; html &gt; fontCSS.html &gt; ... 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3      &lt;head&gt; 4          &lt;meta charset="UTF-8" /&gt; 5          &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6          &lt;title&gt;Font CSS&lt;/title&gt; 7          &lt;link rel="stylesheet" href="../css/styleFont.css" type="text/css" /&gt; 8      &lt;/head&gt; 9      &lt;body&gt; 10         &lt;h1 class="tulisan_satu"&gt;Belajar CSS Dasar asiiik&lt;/h1&gt; 11         &lt;h1 class="tulisan_dua"&gt;Belajar CSS Dasar cihuuuii&lt;/h1&gt; 12         &lt;h1 class="tulisan_tiga"&gt;Belajar CSS Dasar yuhuuuuu&lt;/h1&gt; 13     &lt;/body&gt; 14 &lt;/html&gt;</pre>

```

week2 > source code > css > # styleFont.css > ...
1   .tulisan_satu {
2     color: red;
3     font-family: sans-serif;
4     font-style: normal;
5   }
6
7   .tulisan_dua {
8     color: green;
9     font-size: 24pt;
10    font-style: italic;
11  }
12
13  .tulisan_tiga {
14    color: blue;
15    font-weight: bold;
16    font-style: oblique;
17  }

```

localhost/dasanweb/week2/source%20code/html/fontCSS.html

**Belajar CSS Dasar asiik**

**Belajar CSS Dasar cihuuuii**

**Belajar CSS Dasar yuhuuuuu**

---

My Answer :

- font-family is used as a collection of various types of fonts to be able to display fonts on a web browser that is used when the web does not have the font that is on the far left, then it will use the next type of font and so on until there is a type of font that is available on the web browser (from left to right in order). then for font-style it is used to set the style of the font

## Practical Section 8: Setting Up Hyperlinks with CSS

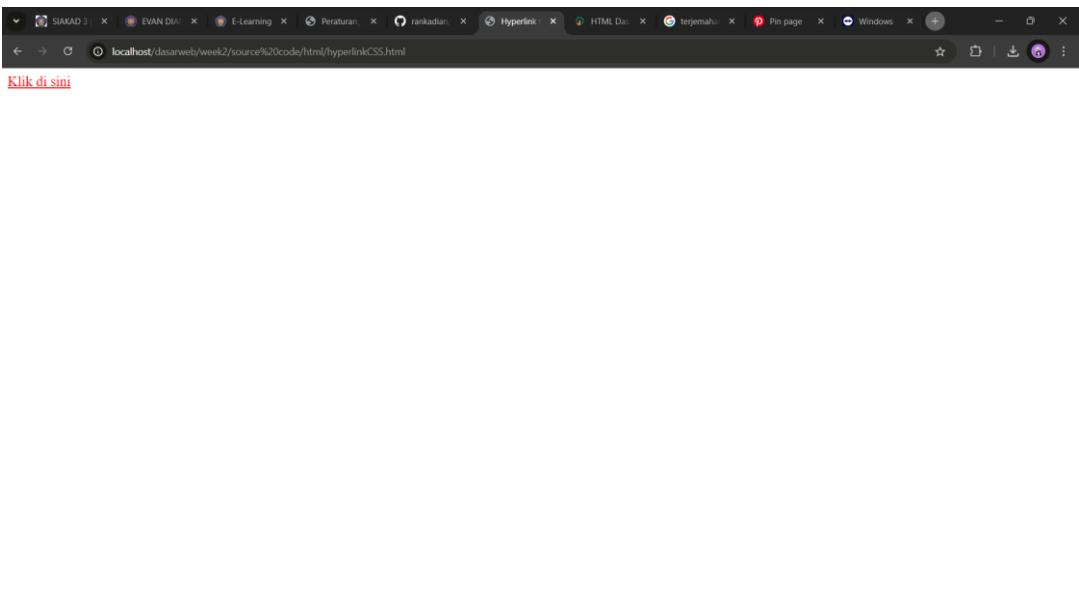

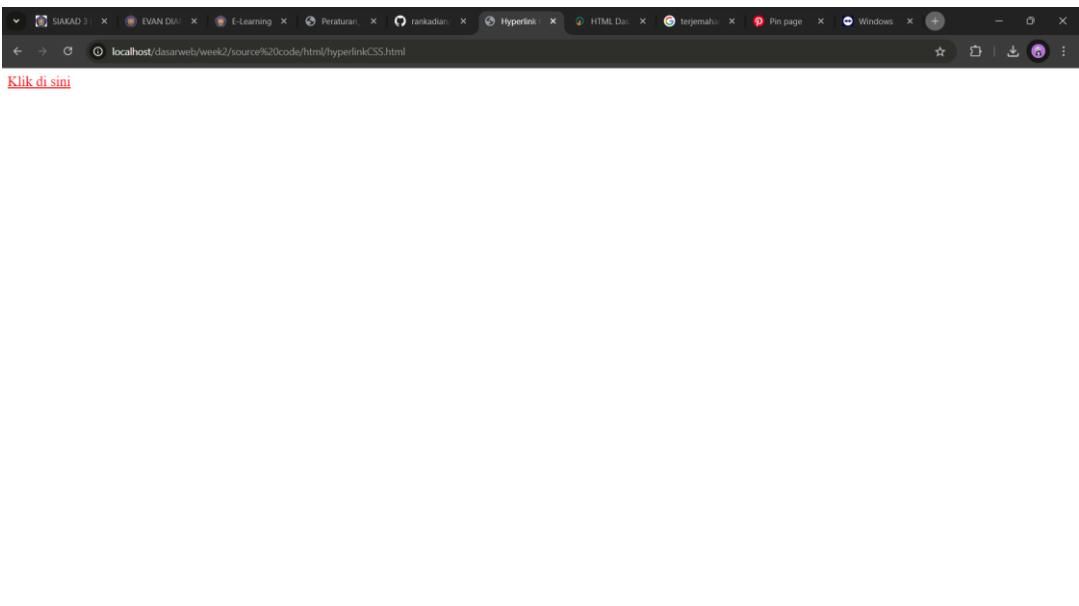

*Hyperlinks* are links that are created to redirect pages when clicked. *Hyperlinks* or links are created using tags and ending with tags in HTML. There are 4 states that are owned by html *hyperlinks* and can be manipulated using css. Namely:

- *link*. is an ordinary active link.
- *visited*. is the status of a link that has been visited.
- *hover*. is the status of a link when the mouse cursor is placed on it.
- *active*. is the status of a link or *hyperlink* when it has been clicked.

The syntax is as follows:

- *a:link* = for regular links
- *a:visited* = is the status of a link that has been visited.
- *a:hover* = is the state of a link when the mouse cursor is placed on it.
- *a:active* = is the status of a link or hyperlink when it has been clicked.

Step	Description
1	Rename <code>index.html</code> to <code>fontCSS.html</code>
2	Create a new file in the <code>dasarWeb</code> folder named <code>index.html</code> . This means that you have a new <code>index.html</code> file.
3	Type the following code to <code>index.html</code>
4	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3 4      &lt;head&gt; 5          &lt;title&gt;Hyperlink CSS&lt;/title&gt; 6          &lt;link rel="stylesheet" type="text/css" href="styleLink.css"&gt; 7      &lt;/head&gt; 8 9      &lt;body&gt; 10         &lt;a class="link" href="http://www.polinema.ac.id" target="_blank"&gt;Klik di sini&lt;/a&gt; 11     &lt;/body&gt; 12 13 &lt;/html&gt;</pre>
5	Create a new file named <code>styleLink.css</code> in the <code>dasarWeb</code> folder
6	Type the following code to <code>styleLink.css</code>
7	<pre> 1  .link{ 2      font-size: 20pt; 3  } 4 5  .link:hover{ 6      color: red; 7  } 8 9  .link:link{ 10     color: blue; 11 }</pre>
8	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb</code>
9	<p>Record your observations and write your answer below (Question No. 11)</p> <div style="display: flex; justify-content: space-between;"> <div style="flex: 1;"> <pre>week2 &gt; source code &gt; html &gt; hyperlinkCSS.html &gt; head &gt; link</pre> <pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3      &lt;head&gt; 4          &lt;meta charset="UTF-8" /&gt; 5          &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6          &lt;link rel="stylesheet" href="../css/styleLink.css" type="text/css" /&gt; 7      &lt;title&gt;Hyperlink CSS&lt;/title&gt; 8  &lt;/head&gt; 9  &lt;body&gt; 10     &lt;a class="link" href="http://www.polinema.ac.id" target="_blank" 11        &gt;Klik di sini&lt;/a&gt; 12    &gt; 13 &lt;/body&gt; 14 &lt;/html&gt;</pre> </div> <div style="flex: 1; text-align: right;">  </div> </div> <pre>week2 &gt; source code &gt; css &gt; # styleLink.css &gt;</pre> <pre> 1  .link { 2      font-size: 20px; 3  } 4 5  .link:hover { 6      color: red; 7  } 8 9  .link:link { 10     color: blue; 11 }</pre>

	
	<p>My Answer :</p> <ul style="list-style-type: none"> <li>- The :hover selector is used to select elements when you mouse over them.</li> </ul>
10	<p>Add code to <code>styleLink.css</code> to change the color of the link to greenyellow after the link is visited.</p>
11	<p>Write the code you added here (question no 12)</p> <pre>.link:visited {     color: greenyellow; }</pre> 

---

My Answer :

- The :visited selector is used to select visited links.

## Practical Section 9: Formatting Text with CSS

The text formatting settings in CSS are as follows:

- a. `color`: to set the color of the text, the value can be filled in as a color or color code
- b. `text-align`: to set the align position on the text or flat text, the values that can be filled in include center to make the text center-aligned, left to make the text left-aligned, right to make the text right-aligned and justify to make the text right-aligned and left-aligned.
- c. `text-decoration`: to set the decoration of the text, the value is none to make the text have no decoration, overline to make the text have a line at the top of the text, line-through to create a scrawly line on the text, and underline to make a line at the bottom of the text (underline).

- d. *text-transform*: to set capital letters in text, values that can be used include uppercase to make text uppercase, lowercase to make text lowercase, and capitalize to make the initial letter of each word uppercase.
- e. *text-indent*: to set the spacing of paragraphs in the text, the value that can be used is in the form of pixel values and others as needed.
- f. *letter-spacing*: to adjust the distance between characters in text, the value filled in the form of pixel values and others.
- g. *Word-spacing*: To set the spacing between words in the text, the value filled in is also a pixel value.
- h. *line-height*: to set the distance between lines in the text value that is filled in the form of a value.
- i. *text-shadow*: to set the shadow effect on the text, the first filled value fills in the value for the left and right distances, and the second fills the top and bottom spacing and the third fills the color. For the example of writing it is 2px 5px blue.
- j. *vertical-align*: to set the align in a vertical form in the text value used is left to make the text aligned left, right to top and center to center.

Step	Description
1	Rename <a href="#">index.html</a> to <a href="#">linkCSS.html</a>
2	Create a new file in the <a href="#">dasarWeb</a> folder named <a href="#">index.html</a> . This means that you have a new <a href="#">index.html</a> file.
3	Type the following code to <a href="#">index.html</a>
4	<pre> 1  &lt;html&gt; 2 3    &lt;head&gt; 4        &lt;title&gt;format text CSS&lt;/title&gt; 5          &lt;link rel="stylesheet" type="text/css" href="styleText.css"&gt; 6    &lt;/head&gt; 7 8    &lt;body&gt; 9        &lt;p class="tulisan_warna"&gt;Mengatur format text dengan CSS&lt;/p&gt; 10       &lt;p class="par1"&gt; 11           Lorem ipsum dolor sit amet, consectetur adipiscing elit, 12           sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. 13           Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris 14           nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in 15           reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. 16           Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia 17           deserunt mollit anim id est laborum. 18 19 20       &lt;p class="tulisan_warna"&gt;Mengatur format text dengan CSS&lt;/p&gt; 21       &lt;p class="par1"&gt; 22           Lorem ipsum dolor sit amet, consectetur adipiscing elit, 23           sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. 24           Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris 25           nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in 26           reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. 27           Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia 28           deserunt mollit anim id est laborum. 29 30   &lt;/p&gt; 31 &lt;/body&gt; 32 33 &lt;/html&gt;</pre>
5	Create a new file named <a href="#">styleText.css</a> in the <a href="#">dasarWeb</a> folder
6	Type the code in step 7 below to the <a href="#">styleText.css</a> .
7	<pre> 1  .tulisan_warna{ 2        color: #blue; 3  } 4</pre>
8	Save the file, then open the browser and run /refresh <a href="#">localhost/dasarWeb</a>
9	Record your observations and write your answer below ( <b>Question No. 13</b> )

The screenshot shows a code editor with an HTML file open. The HTML code includes a meta tag for charset and viewport, a title, and a link to a CSS file named 'styleText.css'. The body contains two paragraphs: one with a class 'tulisan\_warna' and another with a class 'par1'. The 'tulisan\_warna' paragraph has its color set to blue in the CSS. The browser preview shows the text 'Mengatur format teks dengan CSS' in blue.

```

1 <!DOCTYPE html>
2 <html lang="en">
3   <head>
4     <meta charset="UTF-8" />
5     <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6     <title>format text CSS</title>
7     <link rel="stylesheet" href="../css/styleText.css" type="text/css" />
8   </head>
9   <body>
10    <p class="tulisan_warna">Mengatur format teks dengan CSS</p>
11    <p class="par1">
12      Lorem ipsum dolor sit amet consectetur adipisicing elit. Velit, at quo
13      Asperiores adipisci accusantium perferendis omnis minima tempora, dict
14      reiciendis minus provident fugit itaque voluptatum ullam animi laudant
15      numquam sapiente. Lorem ipsum dolor, sit amet consectetur adipisicing
16      elit. Iusto dolorem consequatur iste animi velit accusamus culpa fugit
17      quam vero commodi quo, est placeat ullam eos hic veritatis laudantium
18      blanditiis necessitatibus!. Lorem ipsum dolor sit amet, consectetur
19      adipisicing elit. Perferendis soluta dolore at est, laboriosam commodi
20      tenetur quae, maiores adipisci fugiat labore. Tempore distinctio saepe
21      consequuntur sapiente blanditiis quam velit excepturi! Lorem ipsum dol
22      sit amet consectetur adipisicing elit. Ab voluptatem velit eum quo
23      tenetur, dolor fuga blanditiis accusantium eveniet dicta a, tempora
24      dolorum praesentium doloribus? Debitis tenetur molestias eaque nihil?
25    </p>
26  </body>
27 </html>

```

Mengatur format teks dengan CSS

```

1 .tulisan_warna {
2   color: blue;
3 }

```

localhost/dasarweb/week2/source%620code/html/textCSS.html

My Answer :

- color is used to color text

10

Add code to `styleText.css` to change the position of the text to center by adding `text-align:center;` and add decorations in the form of underlines.

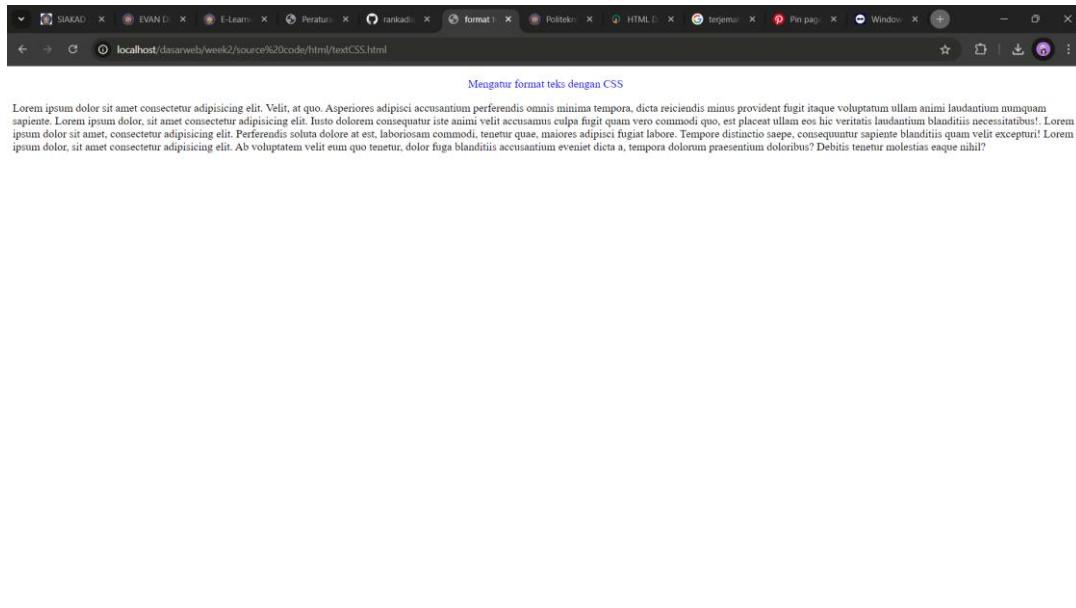

11

Write the code you added here (question no 14)

```

1 .tulisan_warna {
2   color: blue;
3   text-align: center;
4 }

```

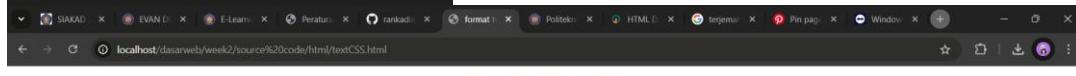

My Answer :

- text-align is used to align text (in code, align it in the center horizontally)

12 Add code to `styleText.css` to add an underline to the text.

Write the code you added here (question no. 15)

```
.tulisan_warna {  
    color: blue;  
    text-align: center;  
    text-decoration: underline;  
}
```

13

My Answer :

- text-decoration is used to give decoration to text (in code using underline for text "Mengatur format teks dengan CSS")

14 Add the code to `styleText.css` to give the spacing between characters in the existing paragraph to 5px with letter-spacing.

15 Write the code you added here (question no 16)

The screenshot shows a browser window with the URL <localhost/dasarweb/week2/source%20code/html/textCSS.html>. The developer tools are open, displaying the following CSS code:

```

1 .tulisan_warna {
2   color: blue;
3   text-align: center;
4   text-decoration: underline;
5   letter-spacing: 5px;
6 }

```

Below the code, the browser displays the text "Menentukan format teks dengan CSS". The text is centered, underlined, and has a blue color. The letter spacing is set to 5px, creating a wider gap between each letter.

My Answer :

- letter-spacing is used to provide space between letters

## Practical Section 10: Getting to Know CSS Positions

Position in CSS is used to set the position of an HTML element. This CSS position property is used to determine the position of an HTML element as desired.

In general, to create a position or set the position of an element we must use other css properties such as setting top, left, bottom, right to set the position of an element, but these properties will not work if the position has not been set first, this is because other properties depend on the position that is set.

Some CSS properties that can be used to position an HTML element are:

- *Static*: Position static is used to set an element to static by default. Elements will follow the normal position by default, elements are not affected by properties such as top, bottom, left and right.
- *Relative*: An HTML element that uses relative position will be located at the normal position. Setting the top, right, bottom, and left properties of an element positioned "relatively" will make it far from its normal position. Other content will not be adjusted to fit the gaps left by those elements.
- *Fixed*: An HTML element set to a fixed position will have a fixed property without any changes even if the website page is scrolled. Left, bottom, top and right settings apply to fixed positions.
- *Absolute*: HTML elements that use the absolute position will be positioned relative to the other elements that precede it closest to it, not relative to the screen normally.
- *Sticky*: An element with a position: sticky; positioned based on the user's scroll position. Sticky elements alternate between relative and fixed, depending on the scroll position. It is positioned relative until a certain offset position meets in the viewport - then "sticks" in place (such as position: fixed).

Step	Description
1	Rename <a href="#">index.html</a> to <a href="#">textCSS.html</a>
2	Create a new file in the <a href="#">dasarWeb</a> folder named <a href="#">index.html</a> . This means that you have a new <a href="#">index.html</a> file.
3	Type the following code to <a href="#">index.html</a>

4

```

1  <html>
2
3  <head>
4      <title>Position CSS</title>
5      <link rel="stylesheet" type="text/css" href="stylePosition.css">
6  </head>
7
8  <body>
9
10 <h2>position: static;</h2>
11
12 <p>Position static digunakan untuk mengatur element menjadi statis secara default.  

13     Elemen akan mengikuti posisi normal secara default,  

14     elemen tidak dipengaruhi oleh properti seperti top, bottom, left dan right.:</p>
15
16 <div class="static">  

17     Elemen ini diatur menggunakan posisi: static;  

18 </div>
19 <br><br><br><br>
20 <h2>position: relative;</h2>
21
22 <p>Sebuah element HTML yang menggunakan position relative akan terletak pada posisi normal.  

23     Mengatur properti atas, kanan, bawah, dan kiri dari elemen yang diposisikan dengan "relatif"  

24     akan membuatnya jauh dari posisi normalnya.  

25     Konten lain tidak akan disesuaikan agar sesuai dengan celah yang ditinggalkan oleh elemen tersebut.:</p>
26
27
28 <div class="relative">  

29     Elemen ini diatur menggunakan posisi : relative;  

30 </div>
31 <br><br><br>
32 <h2>position: fixed;</h2>
33
34 <p>Sebuah element HTML yang di setting dengan position fixed akan memiliki sifat tetap,  

35     tanpa ada perubahan bahkan jika halaman website di scroll.  

36     Berlaku pengaturan left, bottom, top dan right pada position fixed:</p>
37
38 <div class="fixed">  

39     Elemen ini diatur menggunakan posisi: fixed;  

40 </div>
41 <br><br><br>
42 <br><br><br>
43 <br><br><br>
44 <br><br><br>
45 <br><br><br>
46
47 <h2>position: absolute;</h2>
48
49 <p>Element HTML yang menggunakan position absolute akan diposisikan relatif dengan  

50     element lain yang mendahuluinya yang terdekat,  

51     bukan relatif terhadap layar secara normal.:</p>
52
53 <div class="relative1">Elemen ini diatur menggunakan posisi: relative;  

54     | <div class="absolute">Elemen ini diatur menggunakan posisi: absolute;</div>  

55 </div>
56
57 <br><br><br>
58 <br><br><br>
59
60 <h2>position: sticky;</h2>
61 <p>Cobalah untuk <b>scroll</b> untuk mengetahui bagaimana posisi sticky bekerja.</p>
62 <p>Catatan: IE/Edge 15 dan versi yang lebih lama tidak mendukung sticky.</p>
63
64 <div class="sticky">Hola Aku adalah sticky!</div>
65
66 <div style="padding-bottom:2000px">
67     | <p> Dalam contoh ini, elemen sticky menempel pada posisi paling atas halaman (top:0),  

68     |     ketika mencapai posisi scrollnya.</p>
69     | <p>Cobalah untuk melakukan scroll.</p>
70     | <p>Cobalah untuk melakukan scroll.. Lorem ipsum dolor sit amet, illum definitiones no quo, maluisset  

71     |     concludaturque et eum, altera fabulas ut quo. Atqui causae gloriatur ius te, id agam omnis evertitur eum.  

72     |     Affert laboramus repudiandae nec et. Inciderint efficiantur his ad. Eum no molestiae voluptatibus.</p>
73     | <p>Cobalah untuk melakukan scroll.. Lorem ipsum dolor sit amet, illum definitiones no quo, maluisset  

74     |     concludaturque et eum, altera fabulas ut quo. Atqui causae gloriatur ius te, id agam omnis evertitur eum.

39 }

```

#### position: static ;

Position static digunakan untuk mengatur elemen menjadi statis secara default. Elemen akan mengikuti posisi normal secara default, elemen tidak dipengaruhi oleh properti seperti top, bottom, left dan right .:

Elemen ini diatur menggunakan posisi: static;

#### position: relative ;

Sebuah elemen HTML yang menggunakan position relative akan terletak pada posisi normal. Mengatur properti atas, kanan, bawah, dan kiri dari elemen yang diposisikan dengan "relatif" akan membuatnya jauh dari posisi normalnya. Konten lain tidak akan disesuaikan agar sesuai dengan celah yang ditinggalkan oleh elemen tersebut .:

Elemen ini diatur menggunakan posisi : relative;

#### position: fixed ;

p>Sebuah elemen HTML yang di setting dengan position fixed akan memiliki sifat tetap, tanpa ada perubahan bahkan jika halaman website di scroll. Berilaku pengaturan left, bottom, top dan right pada position fixed :

Elemen ini diatur menggunakan posisi: fixed;

### My Answer :

- Position static is used to set an element to be static by default. The element will follow the normal position by default, the element is not affected by properties such as top, bottom, left and right.
- An HTML element that uses position relative will be located in its normal position. Setting the top, right, bottom, and left properties of an element positioned with "relative" will make it far from its normal position. Other content will not be adjusted to fit the gap left by the element.
- An HTML element that is set with position fixed will have a fixed nature, without any changes even if the website page is scrolled. The left, bottom, top and right settings apply to position fixed

## Practical Section 11: Using Floats

The Floating technique in the web design part is the most needed need. The float property is used to position and format content, for example. Make the image hover to the left of the text in the container. One of the most common examples of the use of floats is when we want to create a website postigan that is located on the side of the content text. A float property can have any of the following values:

- left - Floating element to the left of its container
- right- Floating element to the right of its container
- none - The element is not floating (will be displayed exactly where the text appears). It's standard
- *inherit* - This element inherits the float value from its parent

In its simplest use, the float property can be used to wrap text around an image.

Practicum Steps:

Step	Description
1	Rename <a href="#">index.html</a> to <a href="#">positionCSS.html</a>
2	Create a new file in the <a href="#">dasarWeb</a> folder named <a href="#">index.html</a> . This means that you have a new <a href="#">index.html</a> file.
3	Type the following code to <a href="#">index.html</a>
4	<pre>1 &lt;html&gt; 2   &lt;head&gt; 3     &lt;title&gt;Menggunakan Float&lt;/title&gt; 4     &lt;link rel="stylesheet" type="text/css" href="styleFloat.css"&gt; 5   &lt;/head&gt; 6   &lt;body&gt; 7     &lt;h2&gt;Float Kiri&lt;/h2&gt;&lt;br&gt; 8     &lt;div class="float1"&gt; 9       &lt;p&gt; 10      Lorem Ipsum is simply dummy text of the printing and typesetting industry. 11      Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, 12      when an unknown printer took a galley of type and scrambled it to make a type specimen book. 13      &lt;img class="gambar" src="img/lambang-polinema1.png"&gt; 14      It has survived not only five centuries, but also the leap into electronic typesetting, 15      remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset 16      sheets containing Lorem Ipsum passages, and more recently with desktop publishing software 17      like Aldus PageMaker including versions of Lorem Ipsum. 18      Lorem Ipsum is simply dummy text of the printing and typesetting industry. 19      Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, 20      when an unknown printer took a galley of type and scrambled it to make a type specimen book. 21      It has survived not only five centuries, but also the leap into electronic typesetting, 22      remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset 23      sheets containing Lorem Ipsum passages, and more recently with desktop publishing software 24      like Aldus PageMaker including versions of Lorem Ipsum. 25      Lorem Ipsum is simply dummy text of the printing and typesetting industry. 26      Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, 27      when an unknown printer took a galley of type and scrambled it to make a type specimen book. 28      It has survived not only five centuries, but also the leap into electronic typesetting, 29      remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset 30      sheets containing Lorem Ipsum passages, and more recently with desktop publishing software 31      like Aldus PageMaker including versions of Lorem Ipsum. 32     &lt;/p&gt; 33   &lt;/div&gt; 34 &lt;/body&gt; 35 &lt;/html&gt;</pre>
5	Create a new file named <a href="#">styleFloat.css</a> in the <a href="#">dasarWeb</a> folder
6	Type the following code to <a href="#">styleFloat.css</a>
7	<pre>1 h2{ 2   text-align: center; 3   color: #blueviolet; 4 } 5 6 .gambar{ 7   width: 100px; 8   float: left; 9   margin-right: 10px; 10} 11</pre>

8	<p>Save the file, then open the browser and run /refresh <a href="http://localhost/dasarWeb">localhost/dasarWeb</a></p> <p>Record your observations and write your answer below. (Question No. 18)</p>
9	<pre>week2 &gt; source code &gt; html &gt; floatCSS.html &gt; html 1  &lt;!DOCTYPE html&gt; 2  &lt;html lang="en"&gt; 3    &lt;head&gt; 4      &lt;meta charset="UTF-8" /&gt; 5      &lt;meta name="viewport" content="width=device-width, initial-scale=1.0" /&gt; 6      &lt;title&gt;Menggunakan Float&lt;/title&gt; 7      &lt;link rel="stylesheet" href="../css/floatstyle.css" type="text/css" /&gt; 8    &lt;/head&gt; 9    &lt;body&gt; 10       &lt;h2&gt;Float kiri&lt;/h2&gt; 11       &lt;br /&gt; 12       &lt;div class="float1"&gt; 13         &lt;p&gt; 14           Lorem ipsum, dolor sit amet consectetur adipisicing elit. ## What is CSS Layouting?

CSS *layouting* is a technique for arranging the layout of a web page using CSS code. The purpose of CSS Layouting is to make the page look neat and attractive as expected by the creator. CSS *layouting* consists of several parts namely; dimensions, *overflow*, Box model, float and Position

## CSS Display

HTML tags are used to give a 'meaning' to a piece of content (e.g. p for paragraph, h1 for main *heading* and so on). The <div> and <span> tags have no meaning, they are both used to group HTML tags and provide Description to them.

## Practical Section 12. CSS Layouting

Step	Description
1	Create a new file in the dasarWeb folder and name it <code>csslayouting.html</code>
2	Type the following code to <code>csslayouting.html</code>
3	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3  &lt;head&gt; 4      &lt;title&gt;CSS Layouting&lt;/title&gt; 5  &lt;/head&gt; 6  &lt;body&gt; 7      &lt;h1&gt;Selamat Datang Di Website Kami&lt;/h1&gt; 8 9 10     &lt;h2&gt;Daftar Link&lt;/h2&gt; 11     &lt;a href="#"&gt;Link 1&lt;/a&gt; 12     &lt;a href="#"&gt;Link 2&lt;/a&gt; 13     &lt;a href="#"&gt;Link 3&lt;/a&gt; 14     &lt;a href="#"&gt;Link 4&lt;/a&gt; 15 16     &lt;h2&gt;TEKNIK INFORMATIKA&lt;/h2&gt; 17     &lt;img src="logo.jpg"&gt; 18     &lt;p&gt;Pada tahun 2010 berdasar kebutuhan masyarakat dan industri terkait Program Diploma IV bidang informatika maka Polinema mendirikan program studi baru Diploma IV (DIV) Teknik Informatika (TI). Pada awal berdirinya jumlah peserta didik Program D-IV TI hanya terdiri dari 46 Mahasiswa, namun pada tahun 2015 jumlah peserta didik Prodi D-IV TI telah mengalami peningkatan menjadi 545 Mahasiswa.&lt;/p&gt; 19 20     &lt;p&gt;Perkembangan jumlah mahasiswa yang sangat pesat baik di Program Studi D-III MI maupun D-IV TI mendorong pimpinan di Polinema untuk menyatukan kedua program studi tersebut dalam satu organisasi jurusan baru terpisah dari jurusan Teknik Elektro. dibawa Jurusan baru terpisah dari Jurusan Teknik Elektro. Dan pada tahun 2015 berdasarkan SK Direktur Nomor 53 dalam rangka peningkatan mutu pengelolaan dan optimasi sumber daya dibentuklah Jurusan Teknologi Informasi (JTI) dengan prodi D-III MI dan D-IV TI.&lt;/p&gt; 21 22     &lt;p class="copyright"&gt;Copyright 2020. Desain dan Pemrograman Web JTI Polinema&lt;/p&gt; 23 &lt;/body&gt; &lt;/html&gt;</pre>
4	Save the file, then open the browser and run /refresh <code>localhost/dasarWeb/csslayouting.html</code>
5	Then create a <div> on the same html page as in the code below

6

```

1  <!DOCTYPE html>
2  <html>
3  <head>
4      <title>CSS Layouting</title>
5  </head>

### My Answer :

- in the section that has the class .navigation has a pink background and for the class .main it will have a light green background

### Value of display

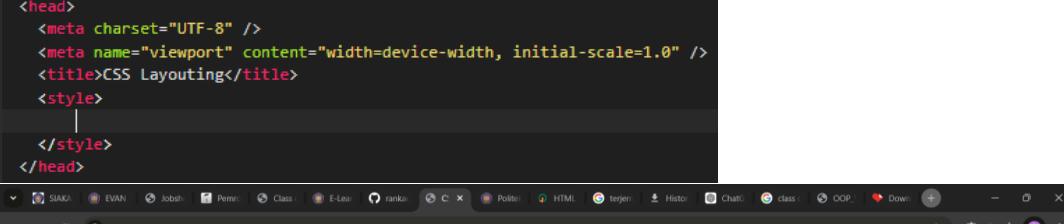

#### ▪ Inline display

HTML elements that by *default* do not add new lines when created. The characteristics of *inline display* are

1. The width and height of the elements are in accordance with the content in them
2. Cannot adjust the height and width of inline elements
3. *Margins* and *padding* only affect elements horizontally, not vertically

The *inline* elements are as follows; **b, strong, i, em, a, span, sub, sub, button, input, label, select, textarea**

### Practical Section 13. Inline Display

Step	Description
1	Delete the <i>style</i> in <b>step 9 Practical Section 12</b> . Add 5 links to the navigation <i>class</i> as shown in the code below.
2	<pre>4 &lt;title&gt;CSS Layouting&lt;/title&gt; 5 &lt;style&gt; 6 7   &lt;/style&gt; 8 &lt;/head&gt; 9 &lt;body&gt; 10  &lt;div class="header"&gt; 11    &lt;h1&gt;Selamat Datang Di Website Kami&lt;/h1&gt; 12  &lt;/div&gt; 13 14  &lt;div class="navigasi"&gt; 15    &lt;h2&gt;Daftar Link&lt;/h2&gt; 16    &lt;a href="#"&gt;Link 1&lt;/a&gt; 17    &lt;a href="#"&gt;Link 2&lt;/a&gt; 18    &lt;a href="#"&gt;Link 3&lt;/a&gt; 19    &lt;a href="#"&gt;Link 4&lt;/a&gt; 20    &lt;a href="#"&gt;Link 5&lt;/a&gt; 21  &lt;/div&gt;</pre>
3	Run the code and capture the results. Explain what happened ( <b>Question No. 21</b> )  <p>Selamat Datang Di Website Kami</p> <p>Daftar Link</p> <p><a href="#">Link 1</a> <a href="#">Link 2</a> <a href="#">Link 3</a> <a href="#">Link 4</a></p> <p>TEKNIK INFORMATIKA</p> 

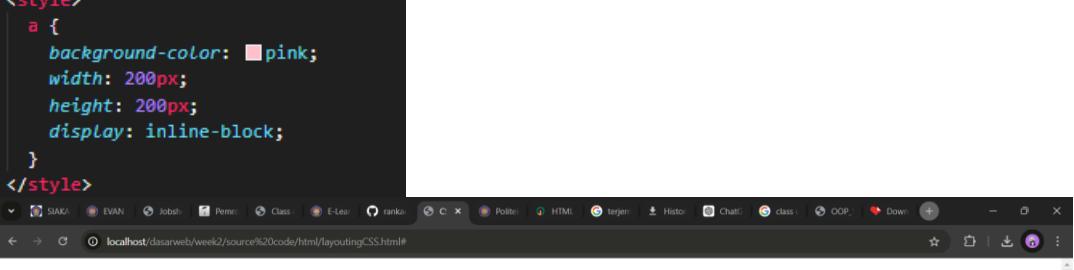

### My Answer :

- The style in the layout.html file will disappear and return to the default before the style tag was given.

- *Display inline-block*

If in an *inline* element we can't set the height and width of an element, then we can set it using *inline-block*. Element has no property by *default*.

### Practicum Section 14. Display *inline-block*

Step	Description				
1	Add <i>weight</i> , <i>height</i> and <i>display</i> to the <i>style</i> in element <b>a</b> as shown in the code below				
2	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3  &lt;head&gt; 4      &lt;title&gt;CSS Layouting&lt;/title&gt; 5      &lt;style&gt; 6          a { 7              background-color: pink; 8              width: 200px; 9              height: 200px; 10             display: inline-block; 11         } 12     &lt;/style&gt; 13 </pre>				
3	<p>Run the code and capture the results. Explain what happened. (Question No. 22)</p>  <p>Selamat Datang Di Website Kami</p> <p>Daftar Link</p> <table border="1"> <tr> <td>Link 1</td> <td>Link 2</td> <td>Link 3</td> <td>Link 4</td> </tr> </table> <p>TEKNIK INFORMATIKA</p>  <p>Pada tahun 2010 berdasarkan kebutuhan masyarakat dan industri terkait Program Diploma IV bidang informatika maka Polinema mendirikan program studi baru Diploma IV (DIV) Teknik Informatika (TI). Pada awal berdirinya jumlah peserta didik Program D-IV TI hanya terdiri dari 46 Mahasiswa, namun pada tahun 2015 jumlah peserta didik Prodi D-IV TI telah mengalami peningkatan menjadi 545 Mahasiswa .</p> <p>Perkembangan jumlah mahasiswa yang sangat pesat baik di Program Studi D-III MI maupun D-IV TI mendorong pimpinan di Polinema untuk menyatakan kedua program studi tersebut dalam satu organisasi jurusan baru terpisah dari Jurusan Teknik Elektro. dibawa Jurusan baru terpisah dari Jurusan Teknik Elektro. Link 1	Link 2	Link 3	Link 4		

My Answer :

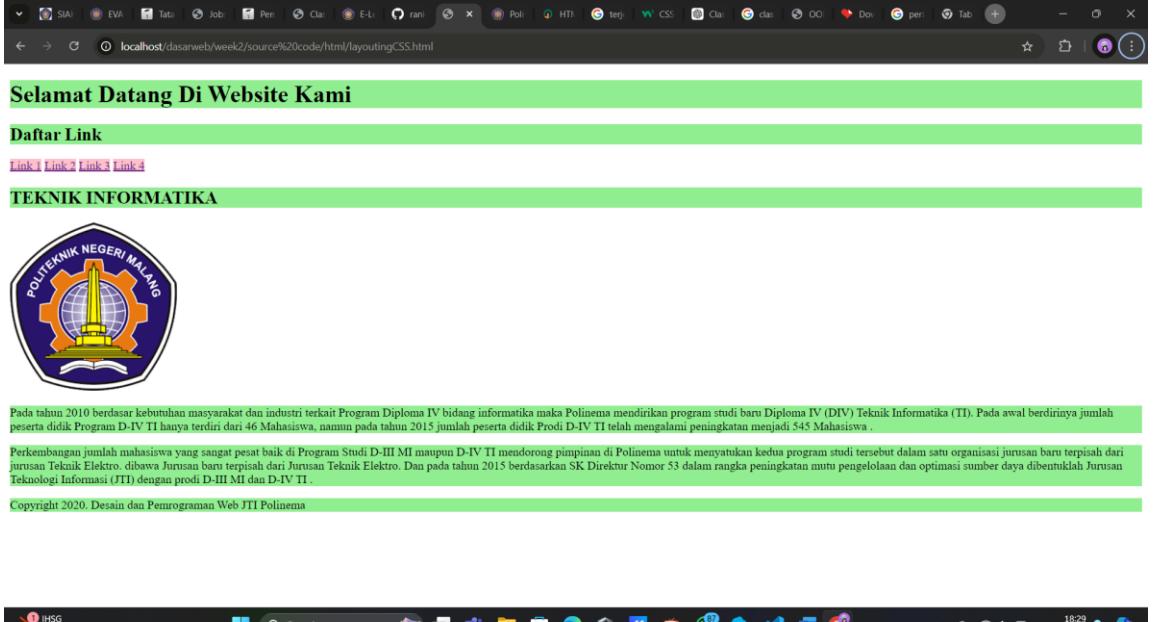

- *display: inline-block* allows to set a width and height on the element. Also, with *display: inline-block*, the top and bottom margins/paddings are respected.

- *Display Block*

*Block* is an HTML element that by *default* adds a new line When it is created If it is not set in width, then the *default* width of the *block* element will meet the width of *its browser/parent* so that we can set the height and width of the *block element*. Inside the *block* element, we can store tags with *inline elements*, *inline-blocks*, or even *block* elements again. Examples of *block* elements are; h1-6, p, ol, ul, li, form, hr, div

### Practicum Section 15. Display *block*

Step	Description
1	Style the h1, h2 and p elements with a light-green <i>background color</i> as shown in the code below

2	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3  &lt;head&gt; 4      &lt;title&gt;CSS Layouting&lt;/title&gt; 5      &lt;style&gt; 6          a { 7              background-color: pink; 8          } 9          h1, h2, p { 10              background-color: lightgreen; 11          } 12      &lt;/style&gt; </pre>	
3	<p>Run the program and try to resize the web page. <i>Capture</i> the results, observe and explain what happened. (Question No. 23)</p>  <p>Selamat Datang Di Website Kami</p> <p>Daftar Link</p> <p><a href="#">Link 1</a> <a href="#">Link 2</a> <a href="#">Link 3</a> <a href="#">Link 4</a></p> <p>TEKNIK INFORMATIKA</p> <p></p> <p>Pada tahun 2010 berdasar kebutuhan masyarakat dan industri terkait Program Diploma IV bidang informatika maka Polinema mendirikan program studi baru Diploma IV (DIV) Teknik Informatika (TI). Pada awal berdirinya jumlah peserta didik Program D-IV TI hanya terdiri dari 46 Mahasiswa, namun pada tahun 2015 jumlah peserta didik Prodi D-IV TI telah mengalami peningkatan menjadi 545 Mahasiswa .</p> <p>Perkembangan jumlah mahasiswa yang sangat pesat baik di Program Studi D-III MI maupun D-IV TI mendorong pimpinan di Polinema untuk menyatakan kedua program studi tersebut dalam satu organisasi jurusan baru terpisah dari jurusan Teknik Elektro dibawa Jurusan baru lepaskan dari Jurusan Teknik Elektro. Dan pada tahun 2015 berdasarkan SK Direktur Nomor 53 dalam rangka peningkatan mutu pengelolaan dan optimasi sumber daya dibentuklah Jurusan Teknologi Informasi (ITI) dengan prodi D-III MI dan D-IV TI.</p> <p>Copyright 2020. Desain dan Pemrograman Web ITI Polinema</p>	
4	Then add a style to the main class as in the code below	
5	<pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3  &lt;head&gt; 4      &lt;title&gt;CSS Layouting&lt;/title&gt; 5      &lt;style&gt; 6          a { 7              background-color: pink; 8          } 9          .main { 10              width: 600px; 11              background-color: lightgreen; 12          } 13          .main h2 { 14              background-color: pink; 15          } 16      &lt;/style&gt; 17  &lt;/head&gt; </pre>	
6	Run the program. <i>Capture</i> the results, observe and explain what happened. (Question No. 24)	

**Selamat Datang Di Website Kami**

**TEKNIK INFORMATIKA**

**POLITEKNIK NEGERI MALANG**

Pada tahun 2010 berdasarkan kebutuhan masyarakat dan industri terkait Program Diploma IV bidang informatika maka Polinema mendirikan program studi baru Diploma IV (DIV) Teknik Informatika (TI). Pada awal berdirinya jumlah peserta didik Program D-IV TI hanya terdiri dari 46 Mahasiswa, namun pada tahun 2015 jumlah peserta didik Prodi D-IV TI telah mengalami peningkatan menjadi 545 Mahasiswa .

Perkembangan jumlah mahasiswa yang sangat pesat baik di Program Studi D-III MI maupun D-IV TI mendorong pimpinan di Polinema untuk menyusun keduai program studi tersebut dalam satu organisasi jurusan baru terpisah dari Jurusan Teknik Elektro, dibawa Jurusian baru terpisah dari Jurusan Teknik Elektro. Dan pada tahun 2015 berdasarkan SK Direktor Nomor 53 dalam rangka peningkatan mutu pengelolaan dan optimasi sumber daya dibentuklah Jurusan Teknologi Informasi (JTI) dengan prodi D-III MI dan D-IV TI .

Copyright 2020. Desain dan Pemrograman Web JTI Polinema

My Answer :

- in the `a` tag it will have a pink background, then in the main class it will have a width of 200px and a light green background color, and in the `h2` main class the tag will have a pink background color.

#### ▪ *Display none*

The last display value is *none*, *none* can be used to remove an element

### Dimensions and Overflow on CSS

Dimensions have two *properties* in CSS, namely *width* for width and *height* for height. Units of dimensions are various including **px**, **%**, **in**, **cm**, **mm** **pc** **pc**.

*Overflow* is a CSS *property* that is used to set the behavior of an element that is not enough on a *parent*. There are four *values* of *property overflow*:

1. *Visible*: Value default
2. *Auto*: CSS will automatically add *scrolls* if there isn't enough content
3. *Hidden*: the content will be hidden or invisible
4. *Scroll*: like auto, will bring up a *scroll*, but if enough *content* scrolls will still exist

### Box model on CSS

Every element on a *website* page is in a *box*. We can set the size and position of the box. We can give a color/image as the *background* of the box. The box model in CSS defines the 'box' generated by an element, and then displays it according to its visual format. The CSS box model consists of 4 components namely; margins, borders, padding and *content* as shown in the image below.

Figure 4. Box Model Components

1. *Margin*: the transparent area around the box (outside the *border*)
2. *Border*: the border around the *content* and *padding*
3. *Padding*: a transparent area inside the box (between the *content* and the *border*)

4. *Content*: the actual content in the *box*, it can be text or images

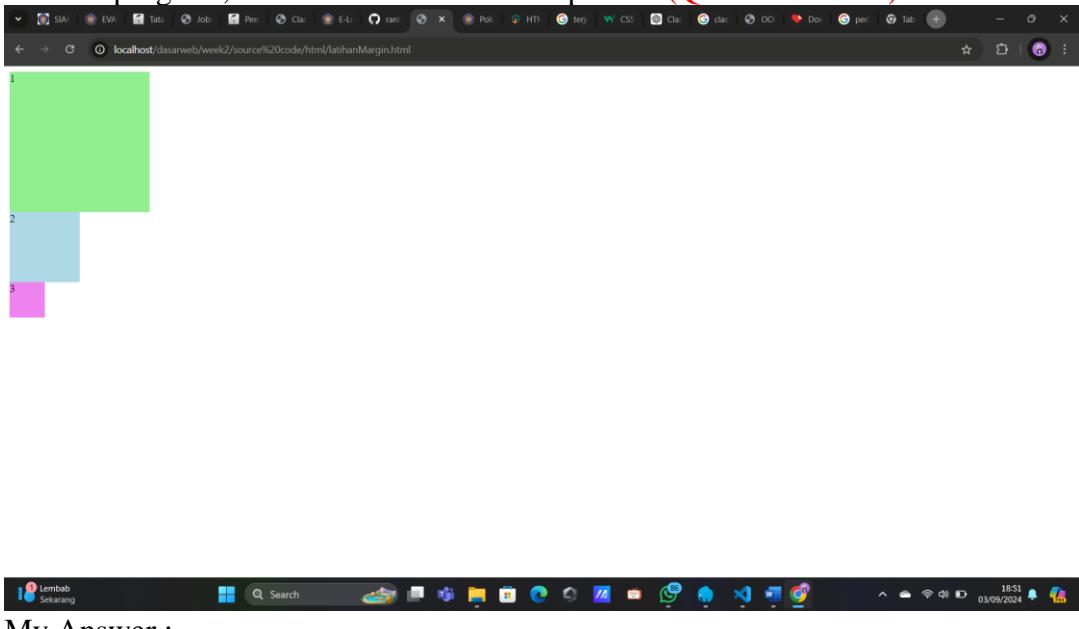

Table 1. How to set up a model box property

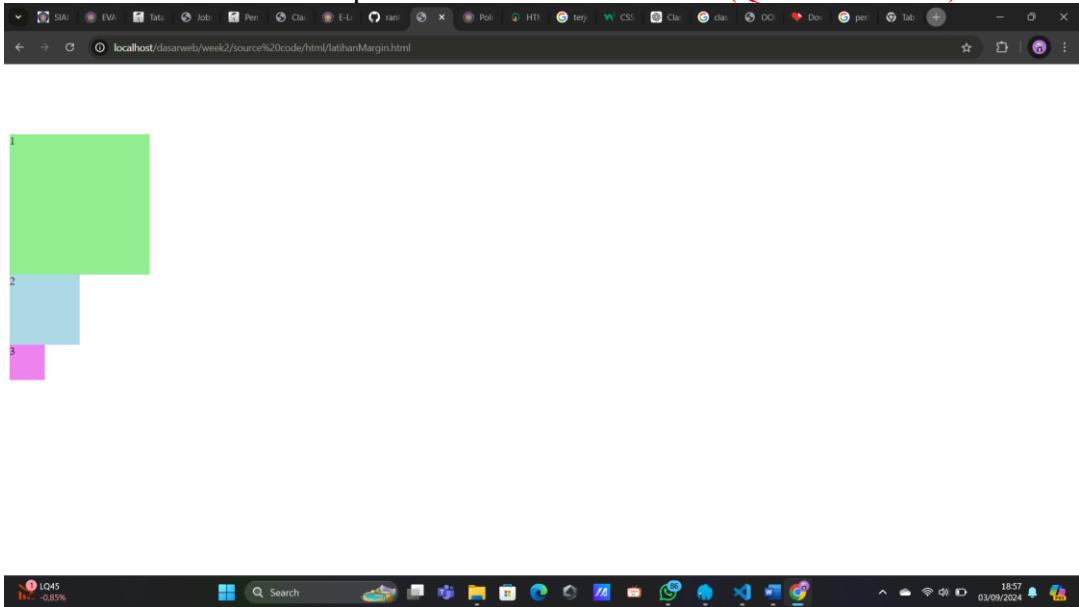

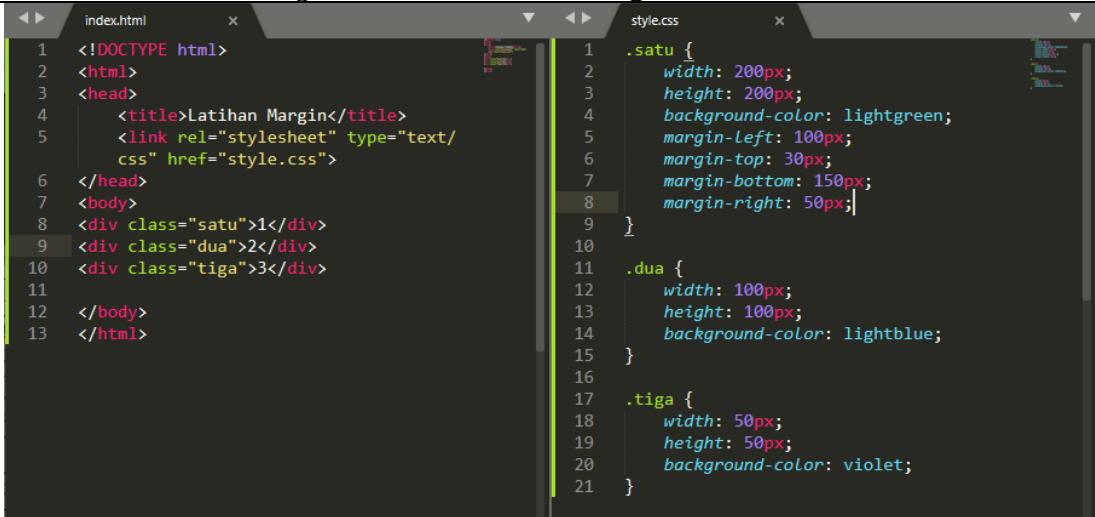

<b>Margin</b>	<b>Padding</b>	<b>Border</b>
<i>Margin-top</i>	<i>Padding-top</i>	<i>Border-top</i>
<i>Margin-right</i>	<i>Padding-right</i>	<i>Border-right</i>
<i>Margin-bottom</i>	<i>Padding-bottom</i>	<i>Border-bottom</i>
<i>Margin-left</i>	<i>Padding-left</i>	<i>Border-left</i>
<i>Margin</i>	<i>Padding</i>	<i>Border</i>

#### ▪ Box Model: Margin

- *Overlapping margin* occurs when we combine two margins. Left and right or up with bottom. In theory, if it happens, the greatest value will be taken.
- *A negative margin* will make the box go in the opposite direction. It can be used if we want to hide elements.
- *Auto margin* is the value that we can assign to the special margin for the left margin and the right margin. This auto will make the element in the middle of the browser's web page
- *Shorthand margin* is a way of abbreviating margin writing.

#### Practicum Section 16. Box Model: Margin

Step	Description
1	Create 2 files as shown in the image below. The first file with the name <code>margin.html</code> and the second file <code>marginstyle.css</code>
2	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <pre> 1 &lt;!DOCTYPE html&gt; 2 &lt;html&gt; 3 &lt;head&gt; 4   &lt;title&gt;Latihan Margin&lt;/title&gt; 5   &lt;link rel="stylesheet" type="text 6   /css" href="style.css"&gt; 7 &lt;/head&gt; 8 &lt;body&gt; 9 &lt;div class="satu"&gt;1&lt;/div&gt; 10 &lt;div class="dua"&gt;2&lt;/div&gt; 11 &lt;div class="tiga"&gt;3&lt;/div&gt; 12 &lt;/body&gt; 13 &lt;/html&gt;</pre> </div> <div style="width: 45%;"> <pre> 1 .satu { 2   width: 200px; 3   height: 200px; 4   background-color: lightgreen; 5 } 6 7 .dua { 8   width: 100px; 9   height: 100px; 10  background-color: lightblue; 11 } 12 13 .tiga { 14   width: 50px; 15   height: 50px; 16   background-color: violet; 17 }</pre> </div> </div>
3	<p>Run the program, observe the results and explain it (Question No. 25)</p>  <p>My Answer :</p>

	<ul style="list-style-type: none"> <li>- in class satu has a width of 200px, a height of 200px, and a lightgreen background. in class dua has a width of 100px, a height of 100px, and a lightblue background. in class tiga has a width of 50px, a height of 50px, and a violet background.</li> </ul>
4	<p>Next is to give <i>a margin</i>, where <i>the margin</i> is the <i>transparent area</i> around the box. Add <i>a style</i> to the <b>margin-top</b> <a href="#">marginstyle.css</a> of 100px on class <b>.satu</b>, save it and then run it in a web browser. Capture and observe the results (<a href="#">Question No. 26</a>)</p> 
5	<p>My Answer :</p> <ul style="list-style-type: none"> <li>- space outside the element (at the top) class satu has a space of 100px</li> </ul>
6	<p>Then add another <b>margin</b> size as in the following code</p>  <pre> index.html 1 &lt;!DOCTYPE html&gt; 2 &lt;html&gt; 3 &lt;head&gt; 4   &lt;title&gt;Latihan Margin&lt;/title&gt; 5   &lt;link rel="stylesheet" type="text/css" href="style.css"&gt; 6 &lt;/head&gt; 7 &lt;body&gt; 8 &lt;div class="satu"&gt;1&lt;/div&gt; 9 &lt;div class="dua"&gt;2&lt;/div&gt; 10 &lt;div class="tiga"&gt;3&lt;/div&gt; 11 12 &lt;/body&gt; 13 &lt;/html&gt;</pre> <pre> style.css 1 .satu { 2   width: 200px; 3   height: 200px; 4   background-color: lightgreen; 5   margin-left: 100px; 6   margin-top: 30px; 7   margin-bottom: 150px; 8   margin-right: 50px; 9 } 10 11 .dua { 12   width: 100px; 13   height: 100px; 14   background-color: lightblue; 15 } 16 17 .tiga { 18   width: 50px; 19   height: 50px; 20   background-color: violet; 21 }</pre>
7	<p>Run the program. <i>Capture</i> the results, observe and explain what happened. (<a href="#">Question No. 27</a>)</p>

My Answer :

- The space outside the element (at the top) of class one has a space of 30px, then the space outside the element (on the left) of class one has a space of 100px, then the space outside the element (at the bottom) of class one has a space of 150px, and the space outside the element (on the right) of class one has a space of 50px

#### ■ Box Model: Padding, Border & Box Sizing

##### *Padding*

How to use *padding* is the same as the margin, namely, it cannot be used *negative*, it cannot be given *an auto value* and affects the size of the *box* of an element.

##### *Border*

How to write it;

*Border: width style color;*

*Style* on border; solid, dotted, dashed, double

##### *Box sizing*

*Box sizing* is a property that accepts the padding and *border* values on an element including the total value of the *width* and *height* of an element.

*box-sizing: content-box (default)| border-box | Unser | initial | inherit;*

## Flex Box

It is a 1-dimensional layout model that can adjust the distance and alignment between items in a *container*. What is meant by one-dimensional is that it can only set one dimension at a given moment, between rows or columns, it cannot be both at the same time.

*Flex Box* or *Flexbox Layout Module* is a module that offers an effective way to arrange, align and distribute the spacing between items in a *container*, even though the size is dynamic or we don't even know.

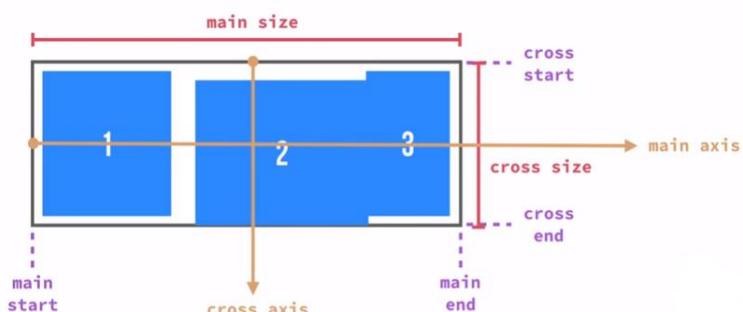

Figure 5. Terms on flex Box

(source: <https://css-tricks.com/snippets/css/a-guide-to-flexbox/>)

- **Main axis**; The main axis of a *container* that determines the order of the horizontal placement of items
- **Main start/main end**; Start and end of items stored in containers
- **Main size**; size (*width/height*) of the *container* which will make the dimensions of the items relative to the size

## Properties on containers

A *container* is a wrapper of an element

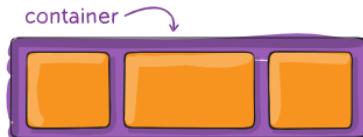

Figure 6. Container

## Display

```
.container {
  display: flex; /* or inline-flex */
}
```

css

*Display* Makes a *parent* element a flex box, and makes the element within it flex as well.

## Flex-direction

*Flex-direction* Sets the direction/order of the items in the *container*

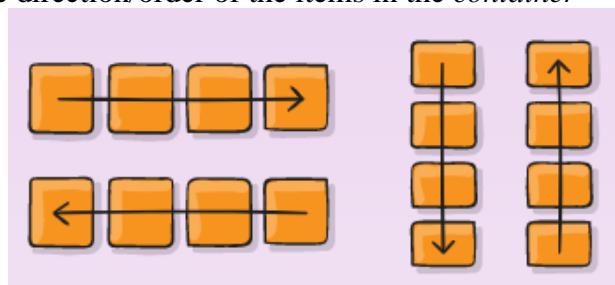

Figure 7. Flex- direction

```
.container {
  flex-direction: row | row-reverse | column | column-reverse
}
```

css

## Flex-wrap

By *default*, all *items* in the *container* will be in one row even if the size is no longer enough, *wrap* allows you to move items to the bottom row

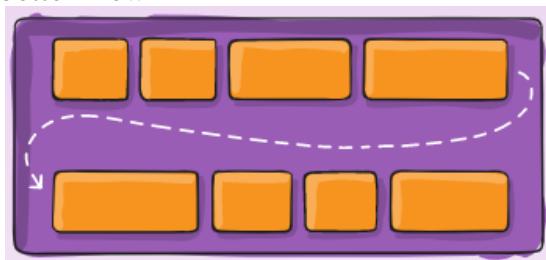

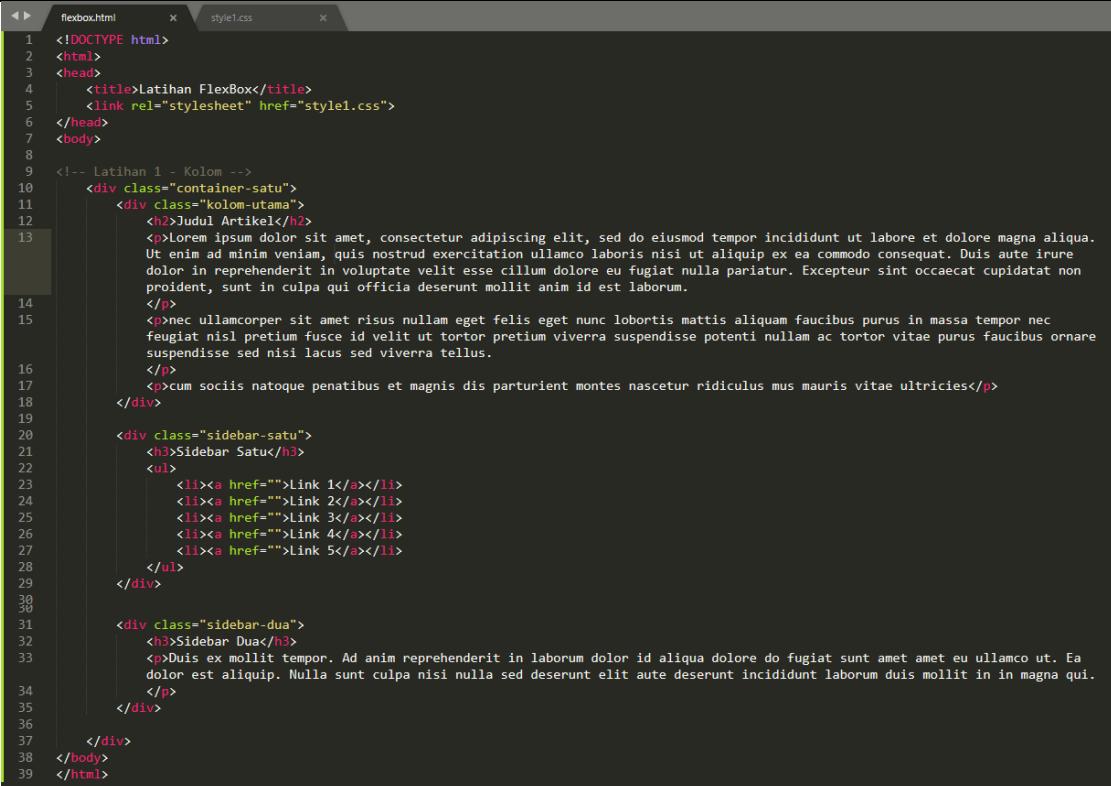

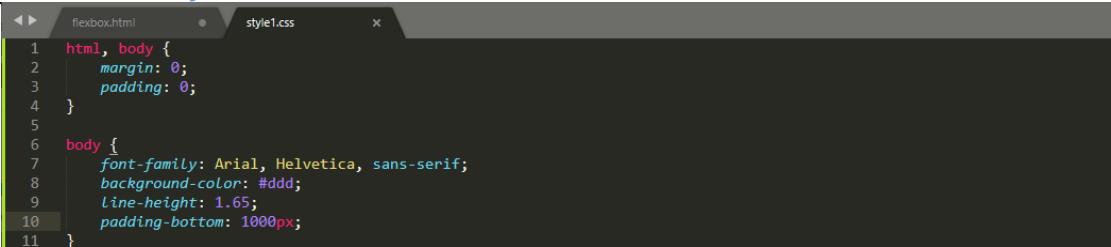

Figure 8. Flex-Wrap

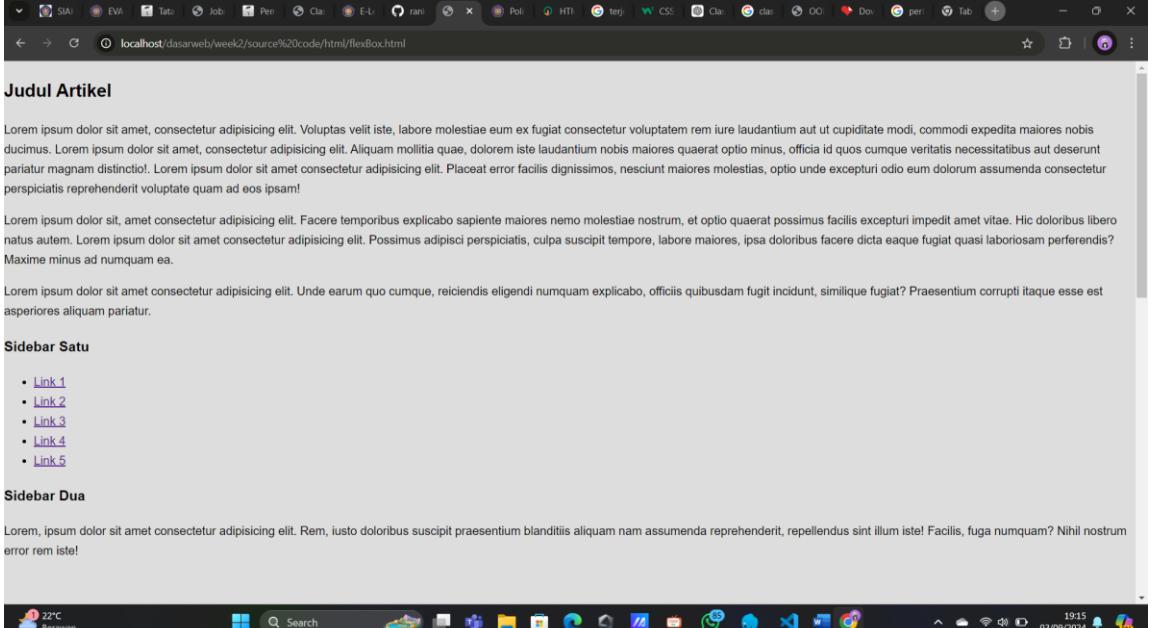

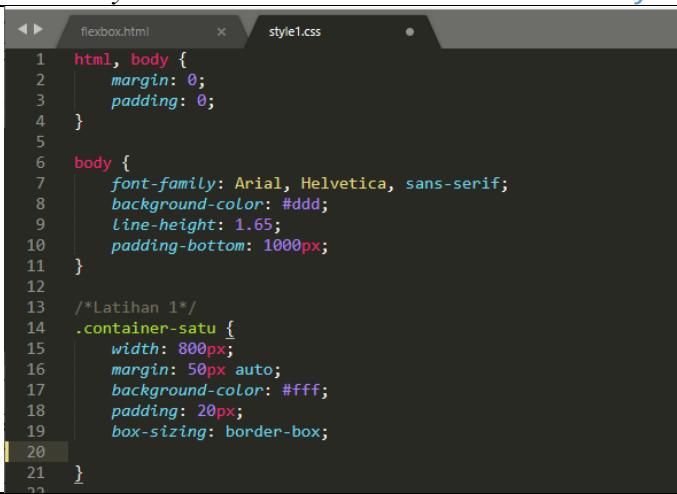

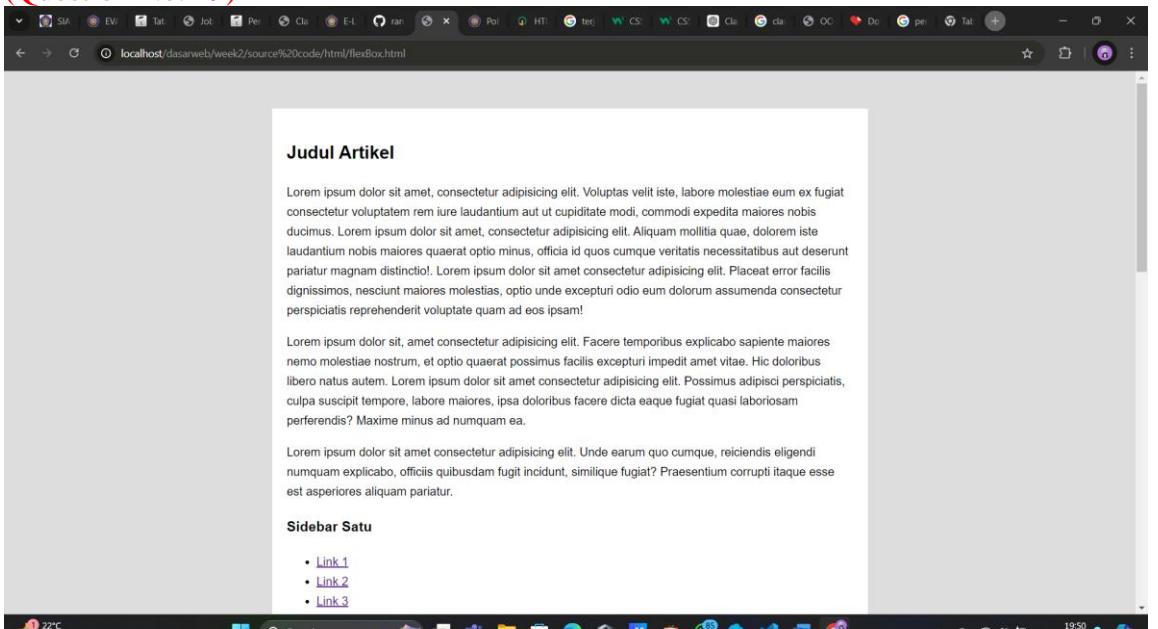

```
.container {
    flex-wrap: nowrap | wrap | wrap-reverse;
}
```

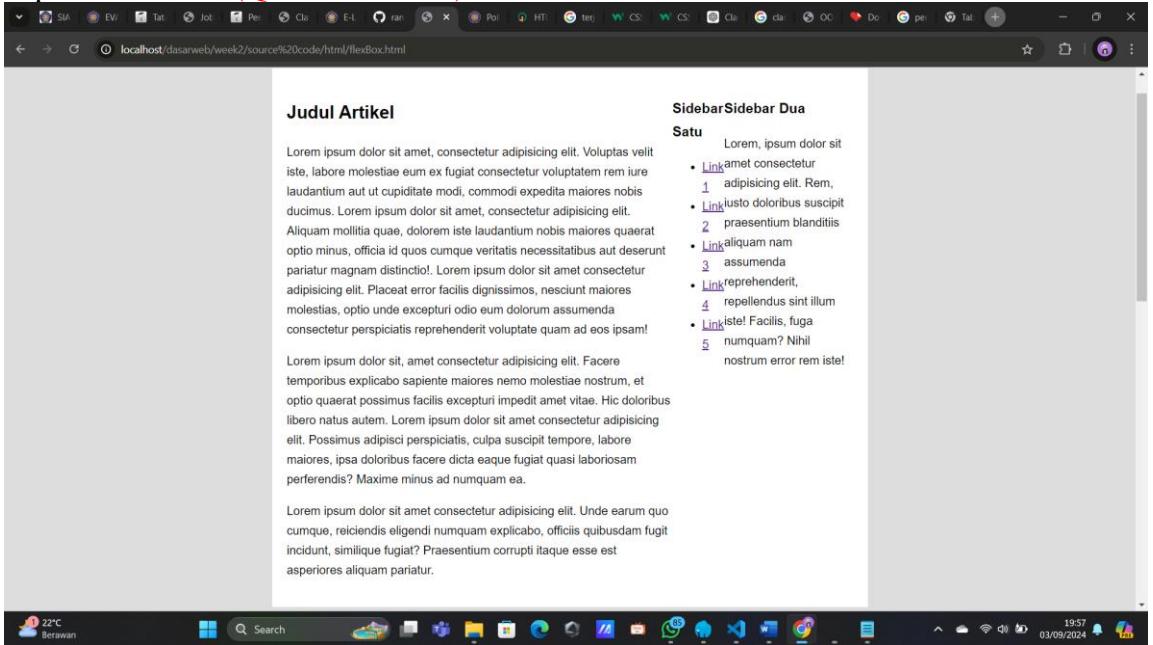

css

For other properties, you can visit the website <https://css-tricks.com/snippets/css/a-guide-to-flexbox/>

## Practicum Section 17. Flex Box

Step	Description
1	Type the code below then save the file with the name <a href="#">flexbox.html</a>
2	 <pre> 1 &lt;!DOCTYPE html&gt; 2 &lt;html&gt; 3 &lt;head&gt; 4     &lt;title&gt;Latihan FlexBox&lt;/title&gt; 5     &lt;link rel="stylesheet" href="style1.css"&gt; 6 &lt;/head&gt; 7 &lt;body&gt; 8 9 &lt;!-- Latihan 1 - Kolom --&gt; 10 &lt;div class="container-satu"&gt; 11     &lt;div class="kolom-utama"&gt; 12         &lt;h2&gt;Judul Artikel&lt;/h2&gt; 13         &lt;p&gt;Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Praesentium corrupti itaque esse est asperiores aliquam pariatur.</p> <p><b>Sidebar Satu</b></p> <ul style="list-style-type: none"> <li>• <a href="#">Link 1</a></li> <li>• <a href="#">Link 2</a></li> <li>• <a href="#">Link 3</a></li> </ul>

	<p><b>My Answer :</b></p> <ul style="list-style-type: none"> <li>- box-sizing: border-box; Changes how the width and height of an element are calculated, including padding and borders. This property ensures that the width of the element remains 800px despite the padding and borders, because the padding and borders are calculated inside the element's size, not added outside.</li> </ul>
9	<p>Add a display property on a container-satu selector with a flex value. Capture and explain the result (Question No. 30)</p>  <p>The screenshot shows a web page with a main content area and two sidebars. The main content area contains a heading 'Judul Artikel' and some placeholder text. The left sidebar is labeled 'Satu' and the right sidebar is labeled 'Dua'. Both sidebars contain a bulleted list of links. The browser taskbar at the bottom shows various open tabs and system icons.</p> <p><b>My Answer :</b></p> <ul style="list-style-type: none"> <li>- display: flex; makes .container-one a flex container, and all child elements inside it will become flex items. This allows for more flexible layout of child elements, such as arranging them horizontally, vertically, or adjusting the space between them.</li> </ul>

## CSS Grid

The CSS grid layout module offers a grid-based *layout system* with rows and columns that makes it easier to design web pages without using floats and positions. It is a new CSS module to define a grid-shaped layout system in 2 dimensions (rows and columns)

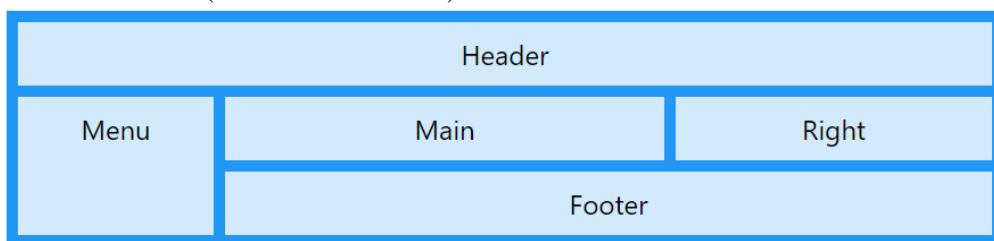

Figure 9 Grid Layout Module

### Grid element

A grid layout consists of a single parent element with one or more child elements

### CSS Grid Terminology

- **Grid container:** The element that wraps the grid, defined by writing: display: grid;
- **Grid items:** Element element located (1 level) in the container grid
- **Grid line;** Horizontal (column) or vertical (row) lines that separate a grid into sections and are marked with numbers
- **Grid cell;** Intersections/confluences between rows and columns in a grid
- **Grid area;** A collection of more than one grid of cells that form a box
- **Grid track;** Size/distance between 2 grid lines, can be horizontal (column) or vertical (row)

- *Folding grid*; Distance between grid tracks/cells

For more details about the grid, you can learn on the following website

### Practicum Section 18. CSS Grid

Step	Description
1	Type the code below then named with <a href="#">grid.html</a>
2	 <pre> 1  &lt;!DOCTYPE html&gt; 2  &lt;html&gt; 3  &lt;head&gt; 4      &lt;title&gt;Grid&lt;/title&gt; 5      &lt;style&gt; 6          body, 7          html { 8              margin: 0; 9              padding: 0; 10             font-size: 20px; 11             font-family: arial; 12             color: white; 13             text-transform: uppercase; 14             text-align: center; 15         } 16 17         .container { 18             width: 600px; 19             margin: 50px auto; 20             border: 5px solid #333; 21             box-sizing: border-box; 22             padding: 5px; 23             display: grid; 24             grid-template-areas: "header header" 25                         "aside main" 26                         "nav main" 27                         "footer footer"; 28             grid-template-columns: 1fr 1.5fr; 29             grid-template-rows: 1fr 1fr 1.3fr; 30         } 31 32         header { 33             grid-area: header; 34             background-color: #B063D8; 35             display: flex; 36             justify-content: center; 37             align-items: center; 38         } 39 40         aside { 41             grid-area: aside; 42             background-color: #2F93FF; 43             padding: 60px 0; 44         } 45 46         nav { 47             grid-area: nav; 48             background-color: #E45765; 49             padding: 100px 0; 50         } 51 52         main { 53             grid-area: main; 54             background-color: #E0AA77; 55             box-sizing: border-box; 56             flex: 1.5; 57             display: flex; 58             justify-content: center; 59             align-items: center; 60         } 61 </pre>

```

61
62     footer {
63         grid-area: footer;
64         background-color: #666;
65         padding: 20px 0;
66     }
67 
```

```
</style>
```

```
</head>
```

```
69
```

```
|<body>
```

```
71     <div class="container">
```

```
72         <header>Header</header>
```

```
73         <aside>Aside</aside>
```

```
74         <nav>Nav</nav>
```

```
75         <main>Main</main>
```

```
76         <footer>Footer</footer>
```

```
77     </div>
```

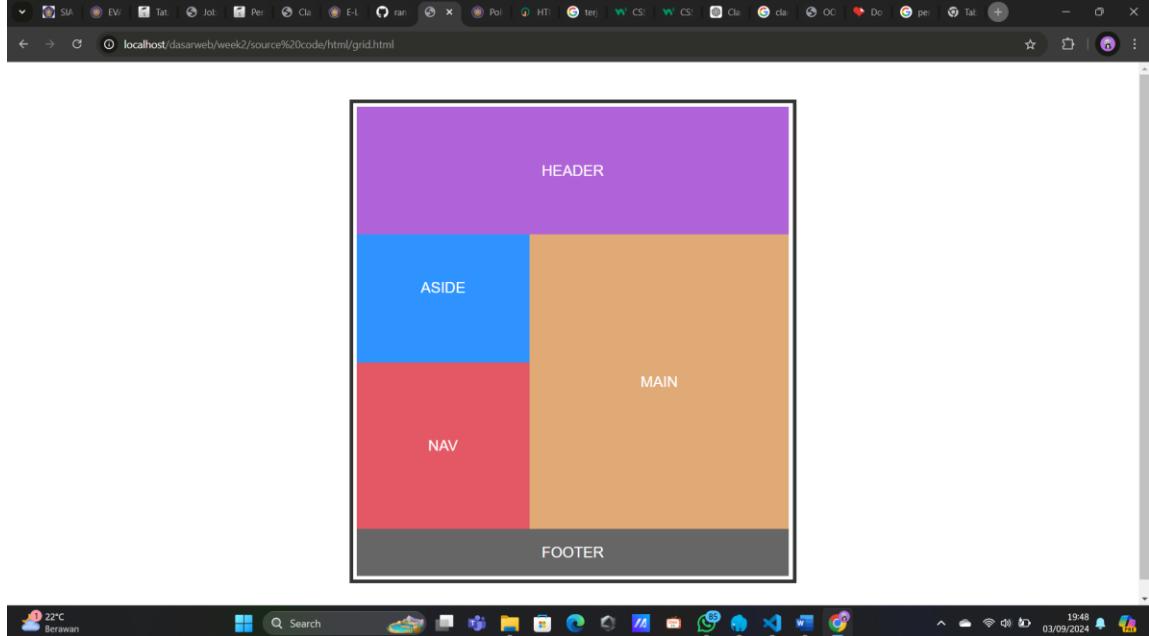

```
78 </body>
```

```
79
```

```
80 </html>
```

5

Run the program, observe the results and explain it. (Question No. 31)

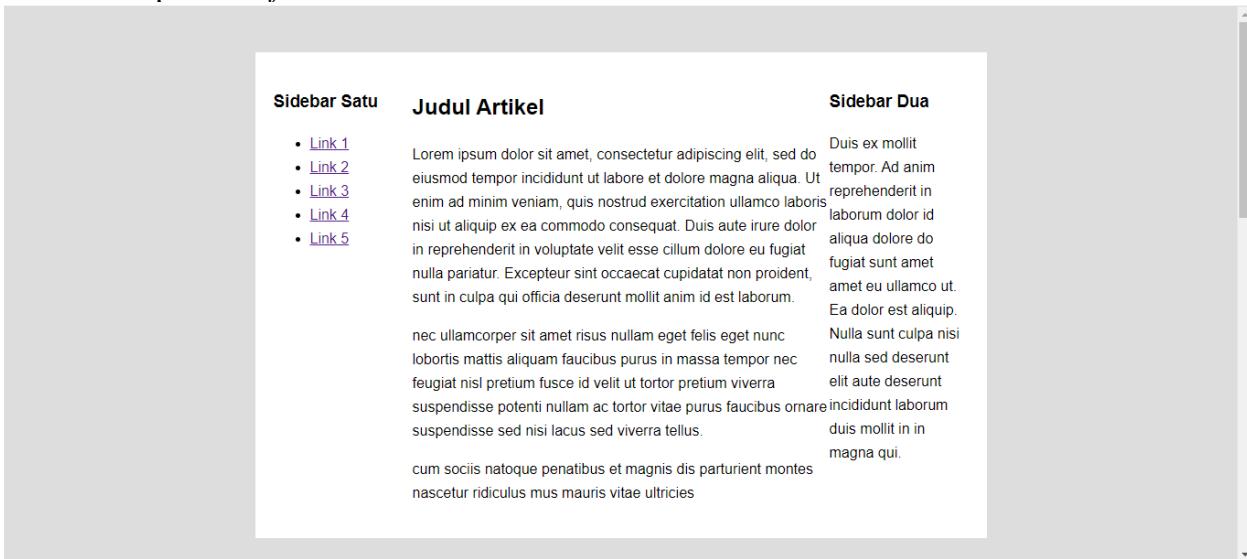

My Answer :

- html
  - margin: 0; padding: 0; Removes the default spacing around the edges of an HTML document.
  - font-size: 20px; Sets the base font size to 20 pixels.
  - font-family: arial; Sets the Arial font for the entire document.
  - color: white; Sets the text color to white.
  - text-transform: uppercase; Changes all text to uppercase.
  - text-align: center; Centers text horizontally within the container.
- class container
  - width: 600px; Sets the width of the container to 600 pixels.
  - margin: 50px auto; Centers the container horizontally with 50 pixel margins on the top and bottom.
  - border: 5px solid #333; Adds a 5 pixel solid border with a dark gray color.
  - box-sizing: border-box; Includes padding and a border in the total width and height of the element.
  - padding: 5px; Adds 5 pixels of padding inside the container.
  - display: grid; Sets the layout as a grid.
  - grid-template-areas: Defines specific areas within the grid for different sections, naming them "header," "aside," "main," "nav," and "footer."
  - grid-template-columns: 1fr 1.5fr; - Defines two columns: the first column takes 1 fraction and the second column takes 1.5 fractions.

- grid-template-rows: 1fr 1fr 1.3fr; - Defines three rows with different height ratios.
- class header
  - grid-area: header; Sets this element to the header area in the grid.
  - background-color: #b063d8; Sets the background color to light purple.
  - display: flex; justify-content: center; align-items: center; Uses Flexbox to center content horizontally and vertically.
- class aside
  - grid-area: aside; Sets this element to the aside area in the grid.
  - background-color: #2f93ff; Sets the background color to blue.
  - padding: 60px 0; Adds 60 pixels of padding vertically inside the aside.
- class nav
  - grid-area: nav; Sets this element to the nav area in the grid.
  - background-color: #e45765; Sets the background color to a reddish pink.
  - padding: 100px 0; Adds 100px of padding vertically inside the nav.
- class main
  - grid-area: main; Sets this element to the main area of the grid.
  - background-color: #e0aa77; Sets the background color to light brown.
  - box-sizing: border-box; Includes padding and borders in the element's dimensions.
  - display: flex; justify-content: center; align-items: center; Centers the content using Flexbox.
- class footer
  - grid-area: footer; Sets this element to the footer area in the grid.
  - background-color: #666; Sets the background color to dark gray.
  - padding: 20px 0; Adds 20 pixels of padding vertically inside the footer.

## JOBSCHEET 2 TASKS (Question No. 32)

1. Make the previous *flex-box* result look like this

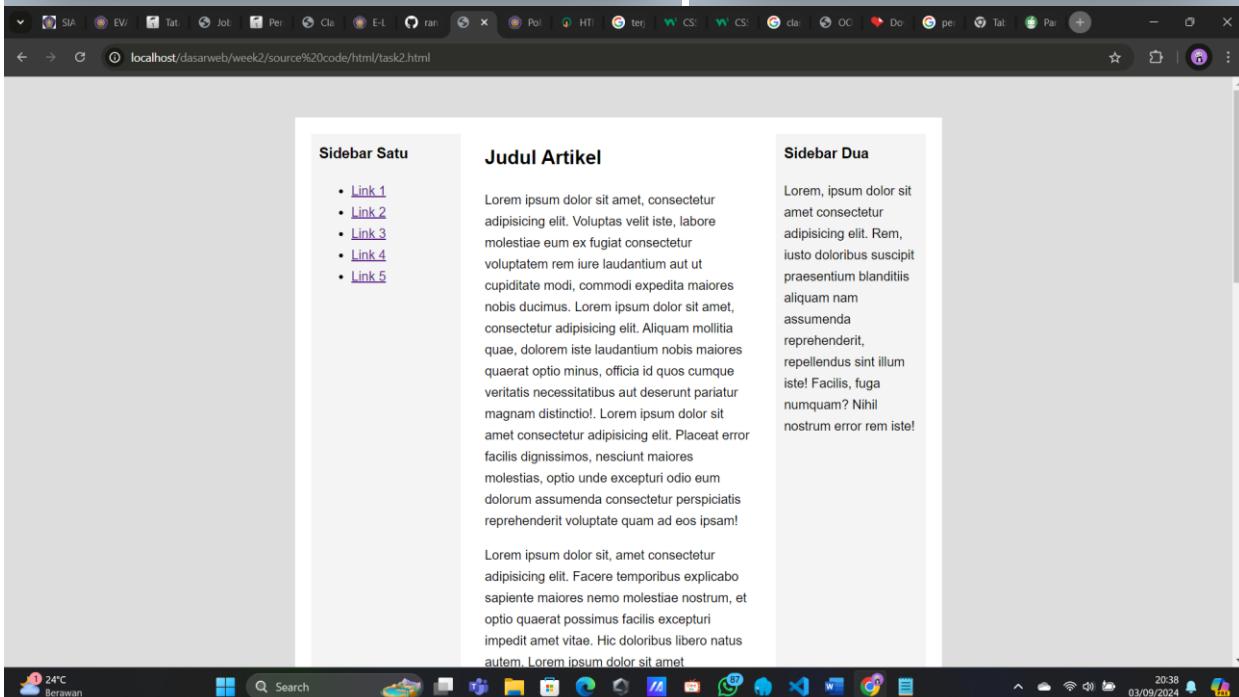

My Answer :

```

1 <!DOCTYPE html>
2 <html lang="en">
3   <head>
4     <meta charset="UTF-8" />
5     <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6     <title>Latihan Flexbox</title>
7     <link rel="stylesheet" href="../css/task2.css" type="text/css" />
8   </head>
9   <body>
10    <div class="container-satu">
11      <div class="sidebar-satu">
12        <h3>Sidebar Satu</h3>
13        <ul>
14          <li><a href="">Link 1</a></li>
15          <li><a href="">Link 2</a></li>
16          <li><a href="">Link 3</a></li>
17          <li><a href="">Link 4</a></li>
18          <li><a href="">Link 5</a></li>
19        </ul>
20      </div>
21
22      <div class="kolom-satu">
23        <h2>Judul Artikel</h2>
24
25        <p>Lorem ipsum dolor sit amet, consectetur adipisicing elit. Voluptas velit iste, labore molestiae eum ex fugiat consectetur voluptatem rem iure laudantium aut ut cupiditate modi, commodi expedita maiores nobis ducimus. 29        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit. Unde earum quo cumque, reiciendis eligendi numquam explicabo, officiis quibusdam fugit incident, similique fugiat? Praesentium corrupti itaque esse est asperiores aliquam pariatur.</p>
30
31      </div>
32
33      <div class="sidebar-dua">
34        <h3>Sidebar Dua</h3>
35
36        <p>Lorem, ipsum dolor sit amet consectetur adipisicing elit. Rem, iusto doloribus suscipit praesentium blanditiis aliquam nam assumenda reprehenderit, repellendus sint illum iste! Facilis, fuga numquam? Nihil nostrum error rem iste!</p>
37
38      </div>
39
40    </div>
41
42  </body>
43
44</html>

```

2. Add images and apply color play to the background to make it more interesting.

**Keywords:** Use the *Flex* and *Order* properties on each of its item selectors. Then capture the code and the result

My Answer :

```
.image {
    max-width: 100%;
    height: auto;
    margin-bottom: 10px;
    border-radius: 5px;
}
```
